ZOLL®

Where Safety and Savings
Meet the Road

Protect Your Crew and Patients with Road Safety

Immediate feedback, immediate results

Road Safety® from ZOLL is the leading proactive driver feedback and performance monitoring system. With Road Safety you can improve safety, reduce costs associated with daily vehicle operations, and create a culture of safety throughout your emergency response organization.

What are your aggressive drivers costing you?

Emergency response is dangerous and often includes aggressive driving. This can lead to accidents and inflate vehicle maintenance and other costs associated with your fleet.

Emergency response vehicles are 13 times more likely to be involved in an accident. And when an ambulance crash is fatal, the costs associated can reach in excess of \$1 million.

By reducing vehicle wear and tear, the Road Safety system typically pays for itself in one to two years. Depending on usage, 30,000–50,000 miles (48,000–80,000 km), could save \$3,000–5,000 USD per vehicle annually.

Why Road Safety?

To change the results, you need to change the behavior. Road Safety is a proven solution to reduce aggressive driving, improve safety, and significantly reduce costs through behavior modification.

Road Safety modifies behavior through real-time audible warnings that alert the driver if he or she is operating the vehicle in an unsafe manner. This immediate feedback allows drivers to correct driving behavior before it leads to a crash.

Drive Safety Up Push Costs Down

CONFIGURATION

Setting up Road Safety is easy using our Web-based system. Your management team decides what the safe driving zone is for various actions and sets parameters.

The Road Safety box is installed in the vehicle and configured to capture data on various actions associated with the individual driver and vehicle, including speed, turns, braking, acceleration, lights and sirens, turn signals, back-up spotter, driver seat belt, and vehicle monitoring.

IMMEDIATE IMPROVEMENTS

Immediate audible feedback is proven to modify driver behavior. Training along with real-time warnings allow drivers to correct risky driving habits before it leads to a crash. This process creates a safer driving environment and provides the added benefit of reduced vehicle maintenance costs, improved fuel economy, extended vehicle life, and better patient care outcomes.

DATA ANALYTICS AND REPORTING

Analyzing driver performance lets you evaluate crew behavior and provide any necessary training to improve safety. Additionally, managers can receive instant violation alerts (email/text) and easy access to critical reports.

PROACTIVE FEEDBACK

Audible tones alert drivers that they are approaching vehicle safety limits so corrective actions can be taken. The audio warning will continue and increase in intensity until the driver corrects the issue.

With easy access to data through ZOLL Online, management can make informed decisions quickly.

Your Safety Is Our Priority

Safety Consulting

Your safety is our priority, so in order to ensure that you are properly set-up and trained for success, we offer safety consulting from industry experts as part of the solution. Our safety consultants use a top-down approach to vehicle safety within an organization. Starting with senior leadership, best practices are developed to ensure all key documentation and tactics are in place for a comprehensive safety program. This approach ensures that everyone in your organization understands the Road Safety system, its far-reaching benefits, and its direct impact on their departments.

Onboard Safety Officer

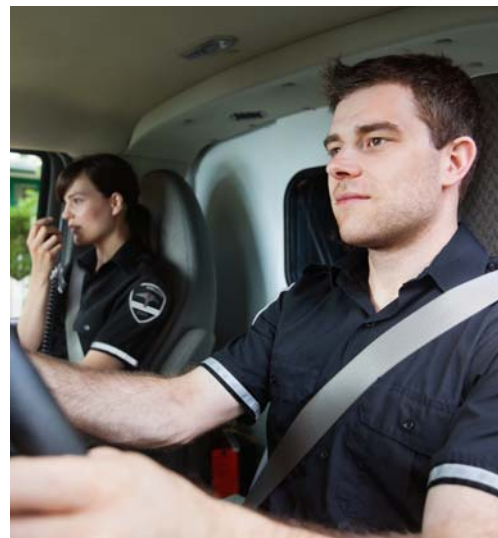

With Road Safety monitoring driver performance, it's like having an onboard safety officer in the vehicle on every response monitoring:

- Back-up spotter
- G-forces (hard-braking and fast-cornering)
- Lights and sirens
- Driver identification
- Seat belt use
- Turn signals
- Speed

Coach your crew to improve safety

Just set the parameters you want to monitor and install the Road Safety box in your vehicles. Tones will alert the driver that corrective action is needed.
