NEWS BULLETIN!

The Housing Authorities Risk Retention Pool (HARRP) risk management team has endorsed the Safe-T-Element for use by Housing Authorities.

This innovative product provides a level of protection from stove top fires unprecedented from all other products reviewed by HARRP. Stovetop fires, a leading cause of fire loss to members of HARRP, the Safe-T-Element burner will not ignite combustibles. This fire prevention product pays for itself in the reduction of fire risk, but goes much further in saving Authorities precious funds.

The Safe-T-Element's functional life span is greatly enhanced over traditional burners. Additionally, Safe-T-Elements use a fractional of the energy necessary for conventional heat coil designs. Installation is easy, with detailed instructions and install with simple hand tools.

HARRP has partnered with Pioneering Technology to provide a bulk rate purchasing coalition for members of the pool. HARRP has secured a rate of \$179.73 per Safe-T-Element unit. This price does not include shipping, as these costs will be determined by quantity ordered and location of drop ship. Additionally, installation will not be covered in the unit rate. Maintenance personnel will be able to install the Safe-T-Elements with minimal difficulty and takes approximately 45 minutes per unit for installation. HARRP and Pioneering Technology are working towards independent installers for those members unable to provide personnel for installations.

For more information on ordering, please contact Kyria McGill at 360/574-9035, extension 105.

For more information on the Safe-T-Element, please contact Al Alvarez at 360/574-9035, extension 104, or Bill Gregory at 360/574-9035, extension 102.

You can speak directly to the manufacturers' representative, Earl Diment at 503/819-2417.
