# Five generations of fine Sicilian wines

©fablogambina

Donnafugata was founded in Sicily by the Rallo family invigorated by a passion that has innovated the style and perception of Sicilian wine in the world.

# DONNAFUGATA®

# The name

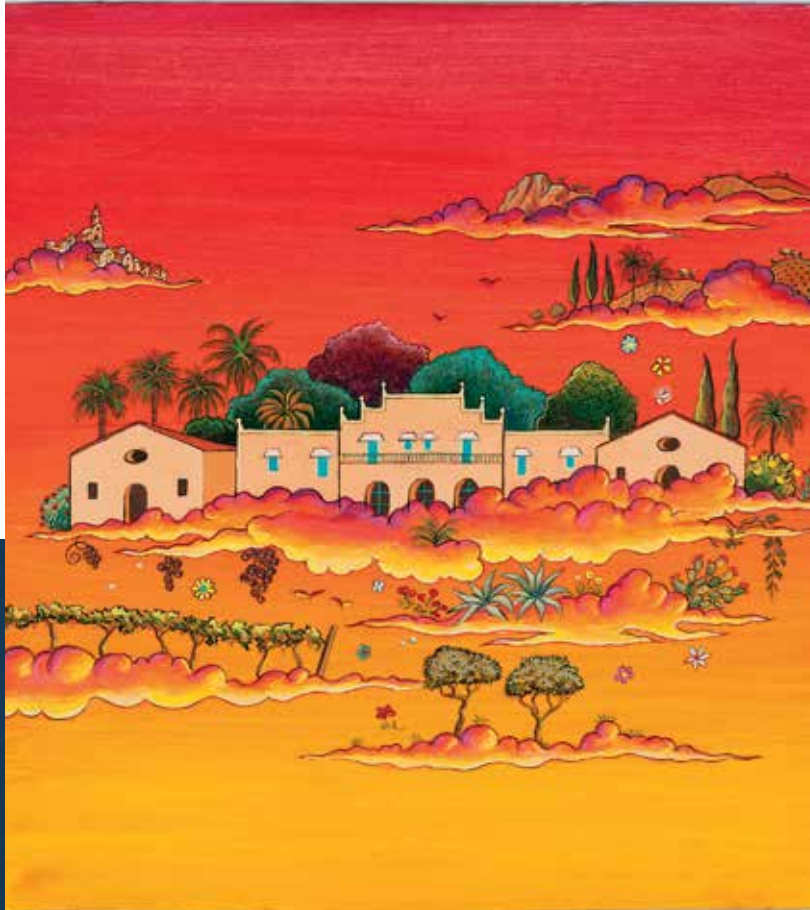

The **name** Donnafugata comes from the novel by Tomasi di Lampedusa entitled **Il Gattopardo** (The Leopard). A name that means “**donna in fuga**” (woman in flight) and refers to the story of a queen who found refuge in the part of Sicily where the company’s vineyards are located today.

An adventure that inspired the corporate logo: a face of a woman with windblown hair, a face that is also that of Gabriella Rallo the “donna-fugata” (woman in flight).

**DONNAFUGATA®**

## Artistic labels

**Gabriella Rallo** has been the source of inspiration for many labels illustrated by **Stefano Vitale** and capable of making the personality of each wine shine. Small extremely colorful treasures, that recount wine and Sicily through a fantastic and feminine language.

Watch our video, Chasing Donnafugata, to learn about the work of artist **Stefano Vitale** and how his work with Gabriella Rallo has helped define and enrich the evolving story of Donnafugata

Guided tours, professional tastings and refined pairings with specialties of the Mediterranean cuisine.

A style of hospitality you can experience all year round at the historic cellars in **Marsala** and, during the summer months, at the winery on **Pantelleria**.

WESTERN SICILY

## Marsala

### Over 160 years of history

The family cellars (1851) are a dynamic **production reality** aimed at excellence. The typical “Sicilian baglio” retains a spacious courtyard dotted with citrus and olive trees.

The winery is oriented towards maximum energy efficiency. Since 2007, an **underground barrique cellar** allows a **reduced use of energy** to maintain the desired temperature (15°C/59°F) and humidity (85%) parameters.

# Sustainable agriculture

Donnafugata produces its grapes respecting nature. In the vineyard it **does not use herbicides** and **chemical fertilizers** and minimizes the use of **phytopharmaceuticals**.

With the use of green manure, organic fertilization, cluster thinning and emergency irrigation, it **rationalizes** the use of soil, water, air and energy.

Two experimental fields have been created in Contessa Entellina and Pantelleria for the safeguarding of **biodiversity** and **autochthonous varieties**, some of which are **relics**.

# Clean energy and landscape protection

 **FAI** FONDO  
AMBIENTE  
ITALIANO

On the path to sustainability, the winery is committed to the production of clean energy through **photovoltaic systems** and energy efficiency, such as performing **night harvests**. Since 2011 Donnafugata has calculated its CO<sub>2</sub> emissions throughout the entire production cycle and has already reduced its **Carbon Footprint** by 10%.

On Pantelleria it maintains **40 km of dry stone walls** and the **Giardino Pantesco** donated to **FAI**.
