

SylLock Plus AV™

**DUAL-ACTION
NITROGEN PROTECTION**

10L

500L

1000L

GUARANTEED ANALYSIS

NBPT (N-(n-butyl) thiophosphoric triamide)	10.0
DCD (Dicyandiamide)	18.75

KEY BENEFITS

Dual-mode nitrogen protection reduces volatilization and nitrification losses, helping keep applied nitrogen available for crop uptake.

Nitrogen loss through volatilization and leaching can reduce fertilizer efficiency and limit crop performance. SylLock Plus AV™ is a dual-mode nitrogen stabilizer containing urease and nitrification inhibitors that help protect applied nitrogen in the soil. By slowing urea hydrolysis and the conversion of ammonium to nitrate, it helps keep nitrogen plant-available longer to support consistent crop uptake and improved nutrient efficiency.

USE TIMING

Apply during fertilizer application.

Application Rates:

Granular Urea:
2.1 L/MT - 3.1 L/MT
UAN Solution/Liquid Manure:
2.1 L/MT - 4.2 L/MT

FIELD TIPS

Use of an accurate scale/ meter to measure product is essential.

COMPATIBILITY

Compatible with any soil type and any crop.

PROPERTIES

Density: 1.13 kg/L
Net Weight: 10.7 kg
Net Content: 9.46 L
