RE: CIRCUIT BOARD RIBBON CONNECTORS

To prevent damage to the fragile locks that secure the ribbons to the connectors on the main board and front panel please note the following.

MAIN BOARD RIBBON CONNECTORS:

Connectors CN2 and CN3 have small black locks that pull to the **right both at the top and bottom** of the connector to release the ribbon. Use caution, these connectors are very **fragile**.

Connector CN1 located at the bottom right corner of the main board is a white ribbon lock that pulls straight out **toward the front cover at the top and bottom of the lock**.
