

GENERAL SESSION LECTURES

FRIDAY, SEPTEMBER 18

Andrew Rossi
DDS, MSD

The dental profession has experienced an exciting amount of technological growth. Explore the exciting world of digital dentistry as Dr. Rossi highlights the benefits of digital dentistry in comparison to the conventional device or technique. Understanding the innovative changes happening in dentistry keeps patients informed about their dental care diagnosis, treatment options and overall oral health care.

From Analog to Digital, the Future of Digital Dentistry | Subject Code 610, 680

Learn how to transition from an analog to a fully digital dental office. The course will teach diagnosis and treatment planning as well as evidence based emerging technologies to implement partial or fully into a dental office.

Main Course Objectives:

- Learn to diagnose and treatment plan using digital software
- Learn about the latest technologies and the evidence supporting them
- Learn how to implement digital dentistry partially or fully into your office

Digitally Planned Smiles | Subject Code 610, 680

In order to see the prosthetic end before we begin, the clinician must find a way to create a facially generated treatment plan. This serves to plan before starting any treatment as well as to communicate to patients the end goal. New software and techniques now make this possible for every clinician.

Main Course Objectives:

- Learn the concept of facially generated treatment planning
- Learn how to use software to communicate with laboratories, surgeons, and patients
- Learn how to implement this concept in your practice immediately

Program Sponsored Through the Generosity of Dentsply Sirona
