Top android phones under 20000

Android Go, also known as Android (Go version), is a stripped-down version of Android designed to run on low-end smartphones. It includes three optimized areas - the operating system, the Google Play Store and Google apps - that have been redesigned to provide a better experience of less hardware. Android Go Os Android Go is based on the regular Android version but it is optimized to run on smartphones with RAM of 512 MB to 1 GB. The first version of Android Go is modeled on Android Oreo, but the latest version is based on Android Pie. Android Go phones get the same updates as regular Android phones; we hope the Android Q Go version will come in the future. Android Go takes up less space than the regular Android version, allowing smartphones with low storage, breathing room to accommodate more media and apps —most Android Go smartphones come with 8 or 16 GB of storage. Devices running Android Go are also said to be able to open apps 15 percent faster than when they run regular Android software. In addition, Google has enabled data savings for Android Go users by default to help them consume less mobile data. Google's Android Go app Like the operating system, Google has also developed apps to make better use of your device's memory. These require up to 50 percent less space and better performance on low-end hardware. Android Go smartphones come with only nine pre-installed apps, listed below:Keep in mind that these apps may be thinner and faster, but they may lack one or two features. For example, you can't set reminders or control smart home devices with Assistant Go, but you can do most other standard things like set alarms, open apps, and ask a variety of questions. It is worth noting that we can expect to see many other Android Go optimized apps in the near future. Developers were able to start producing applications for the operating system with the help of Google's Building for Billions development principle. Android Go Play Store Building a new operating system and pre-installed app pack is a great start for Android Go, but what happens when people start using the device in the real world? To help users maintain the lightweight system they set out to, Android Go devices have access to the exclusive version of the Play Store.The Android Go Play Store offers all the same content as the regular Play Store, only the store is better suited to low storage devices. It has a prominent app section that recommends Android Go handsets-specific apps, directing users towards apps that will be most beneficial to them. The point of What is Go? Demand for smartphones in emerging markets such as India is growing. Google expects its next billion users to come from these countries, where purchasing power is lower than in the West. That's why the company wants to them with a generation of affordable smartphones, under \$100 works faster, provides more space and helps reduce data consumption. It sounds like a great plan on paper, as it could allow Google to increase the number of users of its apps and services. However, the software is only part of the equation. The company must get as many hardware partners as possible on board that will flood the market with smartphones, which will not only have to be affordable but also easy to see. Let's face it, no one wants an ugly smartphone. A few options are already available in the market, which we will consider next. But before we do, check out our short Android Go: A promising start video below to learn more about Google's Go initiative. Best Android Go smartphones We saw the first batch of Android Go devices at MWC 2018. Six smartphones were unveiled at the show including the Alcatel 1X and Nokia 1. Since then, many other Android Go devices have been announced by companies such as Samsung, Motorola and Xiaomi. We won't list all of them in this post, but we'll show you a handful of the best ones. The Nokia 1 Plus Nokia 1 Plus has the same design as the original Nokia 1 - one of the best Android Go phones originally - but packs some important upgrades. The screen is one inch larger, now 5.45 inches with a 75 percent screen-to-body ratio (the screen-to-body ratio of nokia 1 is nearly 60 percent), while the chipset is faster and the front and rear cameras are superior. The Nokia 1 Plus also comes with a 16GB storage option, while the original is limited to 8GB. These are not necessarily flashy improvements, but they are welcome improvements to key areas. The black Nokia 1 Plus costs 99.00 euros (~\$111) on Amazon in Europe currently and £79.99 in the UK but it is not yet available in India. The original Nokia 1, which can now be upgraded to Android Pie, is sold on Amazon India for 3,977 rupees (~\$57.88-\$57.88), if you want a cheap alternative. Buy on AmazonNokia 1 Plus specs5.45-inch IPS LCD display with 480 x 960 resolution, ~197ppi, 18:9 ratio Mediatek MT6739WW chipset (quad-core)1GB ram8GB or 16GB of storage, Purchased on AmazonNokia 1 Plus specs5.45-inch IPS LCD display with a resolution of 480 x 960, ~ 197ppi, 18:9 ratio Mediatek MT6739WW chipset (quad-core)1GB of RAM8GB or 16GB of storage, microSD extends up to 128GB8MP rear camera , 5MP front cameraI can not disassemble the battery 2,500 mAhAndroid 9.0 Pie (Go Edition)145 x 70.4 x 8.6mm, 138gNokia 2.1 The highlight of the Nokia 2.1 is that its battery comes in at 4,000mAh, placing the device right on it with the Galaxy Note 9 and Huawei P20 Pro in this division. The phone has a simple design, is expected at this price range and has a screen Inch. Like most Android Go phones out there, it only comes with 1GB of RAM and 8GB of storage, which can be extended by 128GB with a microSD card. Nokia 2.1 was announced in May and is available in India, Europe and a few other regions. You can get it for about 5,400 rupees (~\$79) 79) 96 euro.5.5-inch IPS LCD display with 1,280 x 720 resolution, 267ppiSnapdragon 425 chipset1GB of RAM8GB of storage, 96 euros.5.5-inch IPS LCD display with a resolution of 1,280 x 720, 267ppiSnapdragon 425 chipset1GB RAM8GB storage, microSD expands up to 128GB8MP rear camera, 5MP front cameraDefusable battery 4,000 mAhAndroid 8.1 Oreo (Go Edition)153.6 x 77.6 x 9.7mm , 174gSamsung Galaxy J4 CoreThe Galaxy J4 Core was announced in November 2018 and is Samsung's second Android device. It has a 6-inch HD+ display and an 18.5:9 frame ratio, just like the company's high-end handsets. The phone is provided by a Snapdragon 425 chipset, comes with 1GB of RAM and offers 16GB of expandable storage. The Galaxy J4 Core is available in three colors - black, blue and yellow - and has a beautiful design with a curved back and relatively thin borders. It was not officially released in the United States, but you can still get international models (without warranty) on Amazon for about \$155.6.0-inch IPS LCD display with a resolution of 1,480 x 720, 274ppiSnapdragon 425 chipset1GB ram16GB of storage, which can be expanded via microSD up to the rear camera 512GB8MP , front camera 5MP3.300mAh PinAndroid 8.1 Oreo (Go Edition)160.6 x 76.1 x 7.9mm, 177gSamsung Galaxy A2 CoreReleased April 2019 , A2 Core has typical Android Go version traps such as front and rear single camera (both at 5MP), 1GB ram and 8GB memory, as well as a 5.0 inch 540x960 pixel screen and 2,600mAh battery. It's a fairly standard set of attributes, but they help keep the price of the phone low - especially the three-year-old Exynos 7870 Octa chipset. At 5,290 rupees (~77 USD), the Galaxy A2 Core is more than just one of the latest Android Go devices on store shelves. It is also one of the cheapest PLS TFT screens with a resolution of 540 x 960, Chipset Exynos 7870 Octa 220ppi 1GB of RAM8 or 16GB of storage, expandable via microSD up to 256GB5MP rear camera , front camera 5MP2.600mAh PinAndroid 8.1 Oreo (Go Edition)141.6 x 71 x 9.1mm, 142gHuawei Y5 Lite (2018)Huawei's Android Go device has a modern design considering its price point. The bezels are relatively thin, the display sports an 18:9 frame rate, and the back looks minimalist with a beautiful camera module in the upper left corner. Like the rest of the Android Go devices, it won't blow your socks off in the specifications department, sporting a 5.45-inch screen, MediaTek MT6739 chipset, and 1GB of RAM. Y5 Lite (2018), or just Huawei Y5 2018 as it is called in some markets, was announced in December and is Huawei's second Android Go device. It's only available in selected areas, but you can get international models on Amazon for \$99.5.45-inch LCD display with 1440 x 720MediaTek MT6739 chipset1GB of RAM16GB of storage, expandable through microSD up to 256GB8MP rear camera, 5MP3.020mAh PinAndroid 8.1 Oreo rear camera (Go Edition)146.5 x 70.9 x 8.3mm, 142gMoto E5 Play Goin July 2018, Motorola announced The Go version of the Moto E5 Play is aimed at Latin America and Europe. The phone has the same specifications as the regular Moto E5 Play, with a few differences here and there. In addition to running the stripped-down Version of Android, it also has a slightly larger screen (5.3 vs. 5.2 inches), a different frame rate (18:9 vs. 16:9) and 1GB instead of 2GB of RAM. The rest of the specifications are the same, as is the design. Very affordable phones - like all other Android Go devices out there - retail for just 99 euros (~\$111). You can make it in black.5.3-inch IPS LCD display with a resolution of 960 x 480, 184ppiSnapdragon 425 chipset1GB of RAM16GB of storage, can be expanded through microSD rear camera up to 256GB8MP, front camera 5MP2.100mAh PinAndroid 8.0 Oreo (Go Edition)148 x 71 x 9mm, 145gXiaomi Redmi GoThe Xiaomi Redmi Go is the company's first device - and so far only - Android Go device is also one of the best Android Go phone you can buy. It's a great option for those looking for a compact phone, as it sports a 5-inch screen. You'll find the Snapdragon 425 chipset along with 1GB of RAM under the hood, just like with so many other Android Go devices. The handset also has a 3,000mAh battery, 8GB of expanded memory and an 8MP main camera. Its biggest advantage over competitors is its price: it can now be found for 67.65 euros (~\$75) or 4,900 rupees. Buy on AmazonXiaomi Redmi Go specifications 5.0-inch IPS LCD display with a resolution of 1,280 x 720, 294ppiSnapdragon 4251GB of RAM8GB built-in storage, expandable via microSD up to 128GB8MP rear camera, 5MP3,000mAh PinAndroid 8.1 Oreo front camera (Go Edition)140.4 x 70.1 x 8.4mm, 137g These are some of the best Android Go smartphones we have seen so far , although there are some others also available. Which one will you add to the list? Let us know in the comments! Comments!
