The agreement is the threshold by which all income estimates are being revised in the same direction. The greater the percentage of estimates the higher the increase, the better the score will be for this component. For example: if there were 10 estimate amendments for a given period, and all were above all, this estimate would be a 100% positive compromise towards revision. If 7 were up and 3 were down, that would be a 70% positive compromise. If 7 were down, but with only 3 being, that estimate would be a 70% negative compromise of the direction of revision. The higher the percentage of upward revision, the better. Factor #1: Agreement - Learn more current Qtr (12/2020) Next Qtr (3/2021) Current year (12/2020) Next year (12/2021) Last 7 days 0 0 0 Last 30 days 30 days 10 days 10 2 0 3 2 last 60 days 1 0 13 4 down last 7 days 0 0 0 last 30 days 1 1 1 4 down last 60 days 11 7 2 10 Jacques Rank four factors include: compromise magnitude, magnitude, Upside down and surprise. Magnitude is the size of the recent change in the current consensus estimate for the fiscal year and the next fiscal year over the past 60 days. By taking the current income estimate and dividing it by estimate from 60 days in advance, you can see what percentage of estimates have changed. For example: if the current estimate is \$1.10 and the estimate from 60 days ago was \$1.00; This would mean a positive 10% increase in the estimated revision. The bigger the increase in percentage in the estimated revision, the better. Factor #2: Magnitude- Learn More Current Qtr (12/2020) Next Qtr (3/2021) Current Year (12/2020) Next Year (12/2020) 2020)12/2021) Current 0.49 0.67 2.55 2.96 7 days ago 0.49 0.67 1 2.5 5 2.96 30 days ago 0.49 0.67 2.53 2.94 60 days ago 0.56 0.7 3 2.47 3.05 90 days ago 0.54 0.72 2.44 3.01 Jacques Rank includes four factors: compromise, magnitude, Upside down and surprise. The upside is the percentage difference between the most accurate estimate and consensus estimate. By dividing the most accurate estimate (as By Zacks) by consensus estimate, you can see the difference between the two. A positive difference is clearly better than a negative one. We have determined the difference between the two estimates with our income ESP (expected surprise prediction). Simply put, stocks with a Zacks rank of 1, 2, or 3 with a positive ESP were shown to surprise 70% of positive times. Factor #3: Upside Down - Learn more current Qtr (12/2020) Next Qtr (3/2021) Current Year (12/2020) Next Year (12/2021) Most Accurate Estimate 0.52 0.61 2.55 2.91 Jacques Consensus Estimate 0.49 0.67 2.55 2.96 Earnings ESPMore Info 5.63%-8.96% 0.23% -1.67% Zacks Rank consists of four factors: compromise, magnitude, Upside down and surprise. The surprise factor looks at the last few quarters of earnings surprises. Companies with a positive earnings surprise are more likely to positively wonder in the future (or miss again if they missed recently). For this reason, given a company's recent surprise history could be a great aid in predicting the surprise chances of their next outing. Factor #4: Surprise-more quarter-ending (9/2020) quarter ended (6/2020) quarter ended (3/2020) Quarter End (12/2019) Average Surprise Report 0.65 0.69 0.71 0.79 NA Estimate 0.51 0.55 0.69 0.75 NA Difference 0.14 0.02 0.04 0.09 Surprise 27.45% 25.45% 2.90% 5.33% 15.28% Jacques Premium Subscription Essential Learn More
