Course Description

Much of what you have done before in your theory classes zoomed into musical structure at a very close level: how different sorts of chords are built, how they are used, how meters work, how different sorts of atonal structures are conceived, etc. In this course we zoom out to the level of the anatomy of parts of musical works, or indeed the anatomy of a work as a whole. We will ask: what stories are told, what kinds of psychological states are expressed, and what kinds of ideologies are enacted through the anatomy or the journey of a piece? We will mostly be studying 18th and 19th century music in the classical tradition and the development of musical romanticism, but will branch out slightly earlier, and also ask some formal questions about pop songs and recent experimental music and sound art—every music has a form, whether it obeys a widely familiar system of labels or not.

Course Objectives

By the end of this course, students will be able to:

1. Recognize common formal types of the tonal era, and their constituent parts  
2. Think form-functionally and hierarchically—that is, understand how a musical section functions in relation to the larger whole  
3. Synthesize harmonic, motivic, textural, and other information to understand overall form  
4. Use fixed theoretical types and ideas flexibly in analysis  
5. Apply elements of musical structure in our performance and listening practice

- Access to Canvas  
- Weekly assignments online
