

SYLLABUS

MTSE-3020: Microstructure and Characterization of Materials

Department of Materials Science and Engineering

Fall 2012

Introduce the principal methods for characterizing materials at all scales (from nano to micro) in terms of atomic composition, atomic structure and chemical bonding. During this course, Students are presented with the basic operation and capabilities of the principal characterization methods used in materials science. This course applies basic science concepts to develop a fundamental understanding of materials characterization methods that are fundamental for graduate research and employment in the area of materials design.

Professor: El Bouanani
Office: E-111 Research Park Phone: 940-369-8109 E-Mail: bouanani@unt.edu
Office Hours: Tuesday 9 AM – 11 AM
Class Hours: M/W 10:30-11:50 AM Class Location: D-207A

Textbook: The Instructor will supply handouts and references.
Course notes for each class (PPT files) will be e-mailed to students

Suggested text books:

- Materials Characterization, Y. Leng, Wiley (2010) ISBN 978-0-470-82298-2
- Microstructural Characterization of Materials, David Brandon and Wayne Kaplan, Wiley
- J.B. Wachtman, Characterization of Materials, Butterworth-Heinemann, ISBN 0-7506-9215-4 (1992).
- C.R. Brundle, C. A. Evans, Jr., and S. Wilson, Encyclopedia of Materials Characterization, Butterworth-Heinemann, ISBN 0-7506-9168-9 (1992).

Homework: Four homework sets will be assigned and graded. The purpose of the homework is to aid in learning the material. Although some collaboration among students in preparing the homework is acceptable, the main work should be primarily yours.
Late homework will not be accepted.

Exams: There will be two examinations and one student project:
Midterm: October 17th
Comprehensive final Exam: December 10th
Student project is due on December 10th

Grading:

(1) Homework (4 total)	20%
(2) Quizzes	10%
(3) Student project	10%
(4) Midterm Exam	30%
(5) Comprehensive Final Exam	30%

1. Quizzes are closed-book. Pop-up quizzes will not be announced.
2. Final exam will cover all chapters
3. Attendance of the class is required. If you are going to miss class, notify me.
4. Unethical conduct on quizzes or exams will automatically lead to failure of the course.
5. Use of laptops, iPads and cell phones is not allowed during class.

Make-up Policy: Make-up tests for quizzes will not be allowed under any circumstance.

SYLLABUS

MTSE-3020: Microstructure and Characterization of Materials Department of Materials Science and Engineering

Fall 2012

Course Topics (*Subject to Change*)

- Syllabus overview/General Introduction to Characterization
- Brief overview of Materials depositions and vacuum Technology
-
- Overview of X-ray, electron and ion sources
- Spectroscopy Using Photon and Ion Probes
 - Photon interactions with matter
 - X-Ray Fluorescence
 - X-ray Photoelectron Spectroscopy/UV Photoelectron Spectroscopy
 - Fourier Transform Infra-Red and Raman
 - Ion interactions with matter
 - Rutherford Backscattering Spectroscopy
 - Secondary Ion Mass Spectroscopy
- Energy Dispersive Spectroscopy
- Introduction to X-Ray and Electron Diffraction
 - X-Ray Diffraction
 - Electron Back-Scattered Diffraction
 - Low Energy Electron Diffraction

Course Goal:

The emphasis of this course will be on techniques utilizing X-ray, electron and ion probes.

Relationship to program Objectives:

(a) An ability to apply knowledge of mathematics, science, and engineering.

(e) An ability to identify, formulate, and solve engineering problems.

(k) An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
