

SYLLABUS

MTSE-3020: Microstructure and Characterization of Materials Department of Materials Science and Engineering

Fall 2014

Introduce the principal methods for characterizing materials at all scales (from nano to micro) in terms of atomic composition, atomic structure and chemical bonding. During this course, Students are presented with the basic operation and capabilities of the principal characterization methods used in materials science. This course applies basic science concepts to develop a fundamental understanding of materials characterization methods that are fundamental for graduate research and employment in the area of materials design.

Professor: El Bouanani
Office: E-111 Research Park Phone: 940-369-8109 E-Mail: bouanani@unt.edu
Office Hours: Tuesday 9 AM – 11 AM
Class Hours: M/W 12:30-1:50 PM Class Location: B157

Textbook: The Instructor will supply handouts and references.
Course notes for each class (PPT files) will be e-mailed to students

Suggested text books:

- Materials Characterization, Y. Leng, Wiley (2010) ISBN 978-0-470-82298-2
- Microstructural Characterization of Materials, David Brandon and Wayne Kaplan, Wiley
- J.B. Wachtman, Characterization of Materials, Butterworth-Heinemann, ISBN 0-7506-9215-4 (1992).
- C.R. Brundle, C. A. Evans, Jr., and S. Wilson, Encyclopedia of Materials Characterization, Butterworth-Heinemann, ISBN 0-7506-9168-9 (1992).

Homework: Five homework sets will be assigned and graded. The purpose of the homework is to aid in learning the material. Although some collaboration among students in preparing the homework is acceptable, the main work should be primarily yours.
Late homework will not be accepted.

Exams: There will be three examinations and one student project:
Midterm-I: October 6th
Midterm-II: November 3^{ed}
Comprehensive final Exam: December 8th
Student's projects are assigned on November 3^{ed} and are due on November 28th

Grading:

(1) Homework (5 total)	20%
(2) Quizzes	10%
(3) Student project	10%
(4) Midterm Exam-I + Midterm Exam-II	30%
(5) Comprehensive Final Exam	30%

1. Quizzes are closed-book. Pop-up quizzes will not be announced.
2. Final exam will cover all chapters
3. Attendance of the class is required. If you are going to miss class, notify me.
4. Unethical conduct on quizzes or exams will automatically lead to failure of the course.
5. Use of laptops, iPads and cell phones is not allowed during class.

Make-up Policy: Make-up tests for quizzes will not be allowed under any circumstance.

SYLLABUS

MTSE-3020: Microstructure and Characterization of Materials Department of Materials Science and Engineering

Fall 2014

Course Topics (*Subject to Change*)

- Syllabus overview/General Introduction to Characterization
- Brief overview of Materials depositions and vacuum Technology

- Overview of X-ray, electron and ion sources

- **Spectroscopies Using Photon and Ion Probes**
 - Photon interactions with matter
 - X-Ray Fluorescence
 - X-ray absorption in materials
 - Instrumentation
 - Elemental identification and quantification
 - Basic principles
 - Instrumentations
 - Chemical identification and quantification
 - Examples and applications

 - X-ray Photoelectron Spectroscopy/UV Photoelectron Spectroscopy
 - Basic principles
 - Instrumentations
 - Chemical identification and quantification
 - Examples and applications

 - Fourier Transform Infra-Red and Raman
 - Basic principles
 - Examples and applications

 - Ion interactions with matter
 - Rutherford Backscattering Spectroscopy
 - Basic principles
 - Instrumentations
 - Atomic Collisions and Backscattering
 - Energy Loss and Backscattering Profiles
 - Examples and applications

 - Secondary Ion Mass Spectroscopy
 - Basic principles
 - Instrumentations
 - Sputtering processes
 - Examples and applications

 - *Examples and comparison of various spectroscopies in applications*

SYLLABUS

MTSE-3020: Microstructure and Characterization of Materials **Department of Materials Science and Engineering**

Fall 2014

- **Topics on Optical microscopy**
 - Metallographic Preparation Techniques
 - Resolution (Rayleigh criterion, pixel counts)
 - Contrast Formation
 - Digital Imaging
 - Image Quantification – Stereology
 - Examples of optical microscopy in applications*

- **Topics on Electron microscopy**
 - Basics of electron sources and vacuum
 - Signal types (SE, BSE)
 - Energy Dispersive Spectroscopy (EDS)
 - How TEM fundamentally differs
 - Examples of electron microscopy in applications*

- **Topics on X-ray diffraction**
 - Bragg's Law
 - Structure Factor
 - Powder diffraction
 - Textured diffraction
 - Examples of X-Ray diffraction in applications*

Course Goal:

The emphasis of this course will be on techniques utilizing X-ray, electron and ion probes.

Relationship to program Objectives:

- (a) An ability to apply knowledge of mathematics, science, and engineering.
- (e) An ability to identify, formulate, and solve engineering problems.
- (k) An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
