Tracing Darwin’s Path (UNT) & Field Biocultural Conservation (UMAG-IEB)
27 December 2018 – 13 January 2019 (includes travel dates) Program & Syllabus (Tentative)

UNT Professors
Dr. James Kennedy, stream ecologist, UNT-UMAG
Dr. Ricardo Rozzi, conservation biologist & environmental philosopher, UNT-UMAG-IEB

UMAG Professors
Dr. Tamara Contador, stream ecologist, UMAG, Chile
Dr. Christian Formoso, writer & poet, UMAG, Chile
Dr. María Teresa La Valle, philosopher, visiting profesor UMAG & Universidad Nacional Tres de Febrero, Buenos Aires, Argentina
Dr. Roy MacKenzie, biologist, UMAG, Chile
Dr. Laura Sánchez, biologist, UMAG, Chile
Dr. Elke Schüttler, invasive species ecologist, UMAG, Chile
MFA Paola Vezzani, sculptor, UMAG, Chile

Invited Professors
Dr. Thorne Anderson, journalist, UNT (Mayborn School of Journalism)
Dr. Thora Herrmann, geographer, University of Montreal
Dr. Mary Power, freshwater ecologist, University of California – Berkley
Dr. Michael Thompson, philosopher, UNT

Teaching Assistant
Javiera Malebrán, environmental biologist, Universidad de Chile & IEB

Student Teaching Assistants
Gaelle Crete
Sabrina Moore

Coordinators
Kelli Moses, international coordinator, UMAG-IEB-Omora Ethnobotanical Park (OEP), Puerto Williams
Jennifer Torres, regional coordinator and accountant, UMAG-IEB-OEP, Punta Arenas

Omora Staff
Omar Barroso, field ornithologist, UMAG-IEB-OEP, Puerto Williams
Miguel Troncoso, education coordinator, UMAG-OEP, Puerto Williams, Puerto Williams

Course Catalogue Information: BIOL 4054/5054 and PHIL 4054/6781
COURSE DESCRIPTION:
Overview: The University of North Texas (UNT), study abroad course, Tracing Darwin’s Path (TDP) is part of UNT’s Sub-Antarctic Biocultural Conservation Program (SBCP; www.chile.unt.edu). It is taught in partnership with a masters-level class in conservation, Field Biocultural Conservation at the University of Magallanes (UMAG), Chile. Both courses are also taught as part of the Chilean Long-Term Socio-Ecological Research (LTSER) Network’s program of field courses, coordinated by the Institute of Ecology and Biodiversity (IEB; www.iebchile.cl).

The Field Biocultural Conservation (FBC) and TDP courses will be held between the 27th December 2018 and 13th January 2019 (dates include travel days). Students participating in both courses will be involved in the same activities throughout the duration of the courses. These activities involve preparatory tasks prior to the course, post-course activities, and for those interested, continued analysis of data.

COURSE GENERAL OBJECTIVES:
Biocultural diversity has been defined as the “diversity of life in all its manifestations -biological, cultural, and linguistic-that are interrelated within a complex socio-ecological adaptive system.” Addressing modern day environmental issues requires approaches that take into account this multi-faceted meaning of diversity. In this context, this course will provide students with an interdisciplinary research, conservation, and education experience at one of the most pristine wilderness areas remaining in the world. The course will explore ways of defining, studying, communicating, and conserving biocultural diversity. These goals will be achieved by exposing students to a first-hand experience using the case study of the creation and implementation of the OEP as a long-term ecological study site that serves to link society and development with biodiversity, history and ecosystems in the CHBR.

SPECIFIC OBJECTIVES:
1) To study various ways of approximating diversity in its multiple manifestation and scales.
2) To observe, describe, and investigate in a philosophically-comparative way, and ecologically-integrated way, conspicuous (e.g., birds, mammals) and less conspicuous (e.g., aquatic invertebrates, non-vascular plants) taxonomic groups.
3) To utilize the OEP and the CHBR as concrete examples of integrating environmental ethics and ecological sciences into biocultural conservation, using the Field Environmental Philosophy (FEP) approach developed by the SBCP research team.
4) Partner students from different cultures along with different academic interests, cultural issues, and perspectives to provide the opportunity for an interdisciplinary experience that integrates philosophical, ecological, environmental, and conservation issues. Through these opportunities, students will discover and better understand their roles as global citizens.

Instructors will strive to provide a characterization of scientific and philosophical research to help make distinctions between these two approaches, as well as identify complementarities between them.

Research topics of the TDP-FBC January 2018 courses
The general topic of these courses is biocultural conservation. It has a strong field component in which students get first-hand encounters with the diversity of people inhabiting the sub-Antarctic Magellanic ecoregion and explore together the main habitat types (including penguin colonies, watersheds dominated by Nothofagus forests, etc.). Course participants include handcrafters from the indigenous Yahgan community, teachers from local schools, tourist operators, as well as Chilean and Latin American students, researchers, and artists.

The class will participate in long-term studies designed to better understand the ecology of the sub-Antarctic forests of the CHBR (55°). The activities will include research on: 1) the ecology of forest bird species through the Omora Park long-term bird-banding program. 2) Human-wildlife conflict: the exotic
mammals of Navarino Island. 3) Long term studies of the diversity and life history of the water invertebrates. 4) Water quality of rivers with different human impacts in the Puerto Williams region. 5) Ecotourism and Biocultural Conservation in the Miniature Forests of Cape Horn and plant biology.

These activities will include study sites in OEP and in the Robalo Watershed on Navarino Island. A specific schedule of activities is provided in the Tentative Schedule.

**Birds, Exotic Mammals, Aquatic Invertebrate, and Water Quality Studies and Ecotourism**

Here are some of the questions that will be addressed in the research:

Small brown forest birds, the most conspicuous and diverse, but little-known vertebrates

A) How many species exist and how abundant are they in the forest?
B) How long do birds live? What do they eat?
C) How are birds affected by habitat disturbances?
D) What food is available for birds?

There are more exotic than native mammals on the Island

A) Which mammals were here 100 years ago and which are here now?
B) How did exotics arrive and became established?
C) What are their roles or impacts in these ecosystems?
D) How can we manage established exotic mammals?

Aquatic invertebrates, as a barometer for watershed and long-term climate change

A) What are the life cycles of the major aquatic invertebrates in the rivers of the CHBR?
B) How are life cycles of aquatic invertebrates influenced by external factors such as temperature and changes to environmental conditions in the watershed?
C) How do aquatic insects link terrestrial and aquatic ecosystems?
D) How do aquatic invertebrates change relative to human impacts?

Water quality in selected rivers near Puerto Williams

A) How do key water quality characteristics change along a stream gradient?
B) How does water quality change relative to human impacts?

**Ecotourism and Biocultural Conservation**

Finally, ornithological, plant, and freshwater ecology work will involve the practice of ecotourism as a tool to achieve biocultural conservation.

A) Students will be required to take what they have learned from the course and prepare activities for tourists and other visitors to Omora Park that include an ecological and ethical orientation.
B) Activity approaches will aim for visitors to gain not only an understanding and knowledge about the unique sub-Antarctic biodiversity, but also provide a transformative experience to cultivate an ethical and sustainable relationship with this biodiversity, both locally and globally.
C) Experience will focus on ecotourism with a hand-lens.
D) The heart-to-heart encounter with the forests birds. How these birds respond to disturbances? How they communicate among themselves? What do they teach us? As part of the living community, our close relatives deserve respect and ethical considerations.
Course Itinerary

The dates and times of the course activities are given in the Syllabus Appendix. This itinerary is tentative and subject to change due to events beyond the control of the course instructors. For example, much of the course is structured around field activities which may be impacted by weather events. A daily schedule with the day’s activities will be posted at the field station.

IN-COURSE ACTIVITIES AND ASSIGNMENTS

Ecotourism with a Hand Lens in the Miniature Forests of Cape Horn
Students will gain a general overview of bryology and identify mosses, liverworts, and lichens on different substrates (bark, soil, rock) and their ecological interactions with other plants, animals, and ecosystem functions. Students will also clearly define economic, aesthetic, ecological, and ethical values of bryophytes and biodiversity in general. They will integrate this understanding with the metaphor of the hand lens and the activity of ecotourism with a hand lens, designing their own way of guiding this activity. This will prepare for practicing the biocultural conservation approach to promote the integration of ecological sciences and environmental ethics, and the conservation of the tiny plants and animals inhabiting the Miniature Forests of Cape Horn that so often are overlooked in traditional conservation initiatives.

Natural History / Art Journal
Field notebooks are critical tools for the field biologist or philosopher to record observations, thoughts, and experiences while in the field. Throughout history, field notes have enabled, not only the person recording the observations but generations of scientists that follow, to think about problems and theories in new ways. When reading the observations that Charles Darwin’s summarized from his journals in the Voyage of the Beagle, it is striking the way he blends scientific observation with reflections about the broader implications, context, and surroundings (including cultures) he encountered in his 5-year trip around the world. Other examples include Lewis and Clark’s writings about the Western United States. We would like to “trace Darwin’s path” and ask each student to keep a journal of the day’s reading, reflections, activities, and achievements. Entries should consist of reflections on the assigned readings, activities and observations made during field activities. Ideally, field notes should be made using a waterproof pen (or pencil) in a journal with waterproof paper (such as Rite in the Rain, All-Weather Journal). However, other notebooks can be used, but they must be bound. Notebooks whose pages are made with 20 lb. paper and have a high cotton content are best. If the notebook is not waterproof, it should be protected in a sealable plastic bag. The maximum size for the field notebook should be approximately 8.5” x 11” when two pages are open. This size enables the journal to be conveniently xeroxed and carried in the field. The class will include drawing exercises. While the same field book, some students may want to use a separate book for these activities. It is expected that journal entries are legible, and kept current. At the end of the class, journals will be collected on 11 January 2018. The journals will be returned after they are graded.

Presentation of Research Results
Students will also prepare PowerPoint presentations after samples have been analyzed to present preliminary results. These presentations will be carried out during January 10th, 2019 at the Field Station.
Grading

Participants in Tracing Darwin’s Path are expected to attend and participate in all course activities. Participation in-course activities and assignments will be count for 75% of the final grade. A list of mandatory, suggested, and supplemental readings is provided in the section following the list of activities. Student responsibilities are to prepare ahead of time, attend all the discussion sessions, field exercises, ask questions, and express themselves creatively and concisely in their work. Ways of earning points for participation include contributing positively to class discussion of readings and participate in field exercises. Contributing positively requires having read, and as thoroughly as possible understood, the assigned readings, and at least being able to raise important questions, if not provide definitive answers. The Post-course assignment Essay will count for 25% of grade you receive in the course.

Post-course assignment Essay

Each student will select one of the research topics/themes covered in the class (listed above) and develop a 5-7 page essay (12 font, 0.5 inch margins, double-spaced). The paper must incorporate the readings, observations from you field books, and class discussion. The paper should include an Introduction, a review of the literature and discussion of the topic you choose especially as it relates to sub-Antarctic region of Chile. Students taking TDP for Biology credit must follow the appropriate format for a citing and preparing a bibliography/literature cited section. Either the format for Ecological Society of America or Entomological Society of America is acceptable. I am including the guidelines for the Entomological Society of America because they provide excellent examples (https://academic.oup.com/aesa/pages/Manuscript_Preparation).

To receive credit, essays should be submitted by email (to Victoria.DeCuir@unt.edu) no later than 5:00 PM on 27 February 2019.

UNIVERSITY OBLIGATIONS AND POLICIES

BEHAVIOR

Study abroad trips require considerable flexibility, maturity, and cultural sensitivity. The culture and the political system you will be exposed to in this class will be different than the US and may provoke strong emotional responses. We expect that you will strive to understand the culture and learn to reason through any uncomfortable, but productive, experiences.

HEALTH, SAFETY, LEGAL ISSUES ABROAD

UNT’s study abroad program will provide guidance regarding legal issues associated with travel to Chile. They will also provide travel health insurance information via the study abroad application link.

Academic Dishonesty Policy: Students are responsible for reading, understanding, and knowing UNT’s Academic Dishonesty Policy that can be found at: http://www.vpaa.unt.edu/academic.integrity.htm. Academic dishonesty in this class is unacceptable and will not be tolerated in any form.

Disability Accommodation Statement: The University of North Texas makes reasonable academic accommodation for students with disabilities. Students seeking accommodation must first register with the Office of Disability Accommodation (ODA) to verify their eligibility. If a disability is verified, the ODA will provide you with an accommodation letter to be delivered to faculty to begin a private discussion regarding your specific needs in a course. You may request accommodations at any time, however, ODA notices of accommodation should be provided as early as possible in the semester to avoid
any delay in implementation. Note that students must obtain a new letter of accommodation for every semester and must meet with each faculty member prior to implementation in each class. *Students are strongly encouraged to deliver letters of accommodation during faculty office hours or by appointment. Faculty members have the authority to ask students to discuss such letters during their designated office hours to protect the privacy of the student.* For additional information see the Office of Disability Accommodation website at [http://www.unt.edu/oda](http://www.unt.edu/oda). You may also contact them by phone at 940.565.4323.

**Drop/Withdrawal Information:** Drop/Withdrawal Information and other important Academic Dates can be found at [www.essc.unt.edu/registrar/schedule/scheduleclass.html](http://www.essc.unt.edu/registrar/schedule/scheduleclass.html)

Appendix:
Tentative Schedule and Activities

TRACING DARWIN’S PATH

Field Biocultural Conservation (Conservacion Biocultural de Campo)

Course Dates: 28 December 2018 - 12 January 2019; Travel Dates: 27 December & 13 January

On days when multiple activities are scheduled, course participants will be divided into smaller groups that will rotate through all of the laboratory and field activities. Please note that this schedule is tentative. Weather or other events beyond the program’s control may require changes to the syllabus.

Unit 1: Introduction to the Region, Course Topics & Ecotourism with a Hand-Lens (EHL)

1330: Lunch at OEP  
1430: “Introduction to the “3 Hs” of Biocultural Ethics” at OEP by Ricardo Rozzi and María Teresa La Valle, in preparation for the basket weaving experience  
1700: Yaghan Indigenous Community Handcrafter: Weaving Baskets with Wetland Rushes by Julia González |
2030: New Year’s Patagonian lamb barbecue
0100: Return to Puerto Williams

1 Tuesday
 AM: Breakfast at hostel & free time
1300: Lunch at Cape Horn Field Station (CHFS)
1500: Hike to top of Cerro Bandera (“Flag Hill”) guided by Omar Barroso & OEP team; reading of “Thinking Like a Mountain” guided by Ricardo Rozzi & Maria Teresa La Valle
1830: Boxed dinner on top Cerro Bandera
1930: Hot soup at CHFS (upon arrival from hike)
2030: The enchanted world of freshwater ecosystems and its keystone species by Mary Power

Unit 2: Field Environmental Philosophy, Biocultural Conservation & Field Research

2 Wednesday
 0700: Breakfast at hostel
  Morning: Hike to Lake Robalo (lunch on the trail)
  • 0800: Fast-paced hiking group
  • 0900: Slow-paced hiking group
  • 1000: Medium-paced hiking group
  • 1100: Medium/fast-paced hiking group
  Afternoon: 1) Set up camp, 2) form groups (students rotate), and 3) preparation for next day’s field work
  • Group: Sub-Antarctic birds, invasive mammals, bryophytes & lichens, and invasive plants (Roy MacKenzie, Omar Barroso)
  • Group: Watershed ecology & freshwater invertebrates (Jim Kennedy, Mary Power, Tamara Contador)
  1800: Dinner at camp site
  1930: Night 1 at Lake Robalo
  • Field Environmental Philosophy (FEP): Step 1
    (María Teresa La Valle, Laura Sánchez, Ricardo Rozzi, Michael Thompson)

3 Thursday
 0700: Breakfast at campsite
  0800 - 1700: Day 1 Field work (lunch in the field)
  1800: Dinner at camp site
  1930: Night 2 at Lake Robalo
  • FEP: Step 2
    (María Teresa La Valle, Laura Sánchez, Ricardo Rozzi, Michael Thompson)

4 Friday
 0700: Breakfast at campsite
  0800 - 1700: Day 2 Field work (lunch in the field)
  1800: Dinner at camp site
  1930: Night 3 at Lake Robalo
  • FEP: Steps 3 & 4
    (María Teresa La Valle, Laura Sánchez, Ricardo Rozzi, Michael Thompson, Thora Herrmann)
