## MATH 3410.003: Differential Equations I (tentative)

TIME AND PLACE: TuTh 15:30-16:50 - CURY 211

PROFESSOR: Santiago I. Betelú

OFFICE: GAB 316, e-mail: betelu@unt.edu

TEXT: W. E. Boyce and R. C. DiPrima: "Elementary Differential Equations

and Boundary Value Problems", John Wiley and Sons 11th ed

OFFICE HOURS: OFFICE HOURS: TR 14:30-15:25 and 17:00-18:25pm

**Grading:** Grades will be based on three midterm exams (20 points each), homework and special projects (20 points) and a final exam (40 points). The lowest of the midterm grades is dropped, so the maximum score is 100. To earn an A you need 90 points, 80 for a B, 70 for a C and 60 for a D.

**Homework:** They will be assigned each class, to be completed the same day of the following week. The homework must be clear and show all intermediate steps. Check with the solutions at the end of the chapter, if you don't get them come to my office for help. When they are graded come to pick them up to my office.

**Exams:** Midterm exams will be given in class on February 13, March 19 and April 16 on the usual class time. The final exam is scheduled on Tue May 5, 13:30-15:30 on the same classroom (these dates may change). Calculators, electronic devices or notes are not allowed during exams.

**Disabilities:** It is responsibility of students with certified disabilities to provide the instructor with appropriate documentation from the Dean of Students Office.

**Cheating:** No cheating will be tolerated. Anyone caught cheating will receive an F for the course. Turn off phones during class and exams.

Week	Sections	Summary
Jan 14	1.1 - 1.2 -1.3 - 2.1 -	Definition and classification of DE's. Direction fields.
	2.2	Linear 1st order ODEs. Separable ODEs. Homogeneous ODEs.
Jan 21	2.3 - 2.4 - 2.5	Modeling with DE's. Linear versus nonlinear equations.
		Domain of existence. Bernoulli ODEs. Autonomous
		equations. Population dynamics. Hanging chains, rock-
7 00		ets, thermal problems and other applications.
Jan 28	2.6 - 2.7 - 2.8	Exact equations. Integrating factors. Euler's approximation. Existence and uniqueness of solutions. Change of variables.
Feb 4	3.1 - 3.2	2nd order linear equations. Existence and uniqueness.
1004	0.1 - 0.2	Equations with constant coefficients. Characteristic
		equation. Linear independence.
Feb 11	3.3- 3.4 -3.5	Complex roots of the characteristic equation. Euler
		equations. Reduction of order. More changes of vari-
		able.
Feb 18	3.5 - 3.6 - 3.7	Nonhomogeneous equations. Undetermined coefficients.
D 1 0*		Variation of parameters.
Feb 25	3.8 - 3.9 - 4.1	Mechanical oscillations. Forced vibrations and reso-
		nance. Higher order linear equations. Existence of solutions.
Mar 3	4.2 - 4.3 - 4.4	Higher order linear equations. Basic theory. Constant
Wiai o	1.2 1.0 1.1	coefficients. Complex roots of characteristic equation.
		Repeated roots. Undetermined coefficients. Applica-
		tions to oscillating systems.
Mar 17	5.1 - 5.2 - 5.3	Power series. Solutions using power series near ordinary
		points. Recurrence formulas and radius of convergence.
		Basic theorems.
Mar 24	5.3 - 5.4 - 5.5	Regular singular points. Relation to Euler equations.
Mon 21	56 57 71	Indicial equation, recurrences and radius of convergence.
Mar 31	5.6 - 5.7 - 7.1	Bessel equation and Legendre equations and applications. Systems of linear equations.
Apr 7	7.2 - 7.3 - 7.4	Review of matrices. Basic theory of linear systems of
11p1 1	1.0 1.3	equations. Solving problems with eigenvalues and eigen-
		vectors. Direction field.
Apr 14	7.4 - 7.5	Applications to systems of equations: connected tanks,
		systems of springs and masses.
Apr 21	7.6 - 7.8 -7.9 8.1	Complex eigenvalues and repeated eigenvalues. Nonho-
3.5		mogeneous systems. Basic numerical approximations
May 5		Final Exam Tue 13:30-15:30pm
