wolverton@unt.edu

341 Environmental Science

Office Hours: W 2-4 pm, by appointment

Course Description

This course is an introduction to fundamental processes that operate in the earth's systems (living and inert) in the air, water, on land, and in the ground. We consider these processes in reference to a range of salient issues in contemporary society, such as human-environment interactions, conservation, and global climate change. The ultimate goal of the class is to be more aware of and knowledgeable about the world around us - earth.

The class is taught in the following manner: 1) Lectures and corresponding readings are organized in a series content *blocks*. 2) Each lecture is boiled down to *defining* five to ten important related concepts. 3) Part of each lecture is devoted to *contextualizing* those concepts. 4) The last part of each lecture is dedicated to articulating questions and responses about (*evaluation of*) definitions and context. 5) A series of related concepts from the textbook that are not covered in lecture will be identified at the end of each lecture for students to define, contextualize, and evaluate within the block outside of class. Defining, contextualizing, and evaluating material leads to comprehending the material from each block. Exams will be limited to those definitions and concepts covered in class and identified as important from the textbook for each block at the end of lectures.

Labs

The lecture and lab sections for Earth Science are separate and taught by different parties; therefore, the professor in the lecture may not know who is your TA is. However, the lab grade is integrated into the final grade with lecture counting for 70% and lab counting for 30% of the final grade. If you have questions concerning your TA please contact the Earth Science Lab Coordinator, Professor Harry Williams; his email is harryf.williams@unt.edu and in addition to a number of geology courses he also teaches lecture sections of Earth Science.

Book (required)

Marsh and Kaufman 2013. *Physical Geography: Great Systems and Global Environments*

Reading Assignments

I provide the readings for each week at the beginning of the week, which will be listed on blackboard and presented in class. Not all of the readings are from the book, and we read sections of the book (not whole chapters) as well as outside material.

Exams & Grades

There are five non-cumulative exams in this course, each worth twenty percent of the final course grade. The final grade breakdown is as follows 90% + of the total points = A, 80 to 89.4% of the total points = B, 70 to 79.4% of the total points = C, 60 to 69.4% of the total points = D, 59.4% and below = F.

Advice

There is a lot of information in this class; thus, it is important to be organized and to spend a lot of time with the course material. From lecture, you will know exactly which concepts from class and from the textbook to concentrate on. I do not test on concepts from the textbook that have not been identified in class as important (at the end of each lecture). I strongly advise you take the following steps.

PowerPoint lecture presentations will be posted on Blackboard at the time of lecture. You will not be able to rely on seeing them before class. Do not consider the PowerPoint presentations to be a comprehensive representation of the class or a substitute for class notes. Slides embody very little text and instead rely on diagrams and images. Note-taking is a must in this class.

Prior to Spring Break, students may take one of the UNT Learning Center's Learning 101 Workshops (<http://learningcenter.unt.edu/learning101>) and by so doing may drop their lowest test score at the end of the semester. Students must take all five exams in order to drop the lowest one. To receive credit, students must turn in the attached form, stamped by The Learning Center prior to Spring Break (by Friday, March 13 - the last day before Spring Break).

Students should take notes by hand in a notebook as studies highlight this leads to greater retention of material than taking notes via tablet, phone, or laptop (<http://www.theatlantic.com/technology/archive/2014/05/to-remember-a-lecture-better-take-notes-by-hand/361478/>). If you have trouble taking notes by hand, then prioritize the note-taking Learning 101 workshop.

Rewrite or type your notes after class; this solidifies many concepts and helps identify when your understanding is weak.

Make flashcards of all definitions from the lecture and those identified in class as important from the textbook and memorize solid definitions (see this blog post on memorization to learn its benefits: <http://dspunt.blogspot.com/2012/03/lost-art-of-memorization.html>).

Although I provide test-like questions in class (for the evaluation part of lecture) and identify the important related concepts from the textbook each day, you must come to class to receive these as they will not be part of the PowerPoint presentations posted on Blackboard.

Relevant sections of the textbook will be identified at the end of each lecture; it is rare that whole chapters will be utilized.

COURSE OUTLINE

Block 1 — Physical Geography Basics and Energy

Week 1: August 24 – 28

Introduction

Basic Physical Geography, Maps

Week 2: August 31 – Sep 4

Basic Physical Geography, Maps

Energy: Solar Radiation, Light

Week 3: Sep 9 – 11

Energy: Solar Radiation, Heat, Planetary Motion

Energy and the Atmosphere

Monday, Sep 14, Block 1 Exam

Block 2 — Air

Week 4: Sep 16 – 18

Air circulation

Wind systems

Ocean Circulation

Week 5: Sep 21 – 25

Ocean Circulation

Weather

Climate

Week 6: Sep 28 – Oct 2

Climate

Climate Change

Monday, October 5 Block 2 Exam

Block 3 — Ecosystems

Week 7: Oct 7 – 9

Ecosystems

Biogeography

Humanity

Week 8: Oct 12 – 16

Humanity

Soil processes

Soil Types

Week 9: Oct 19 – 21

Easy chemistry of water

Friday, October 23 Block 3 Exam

Block 4 — Water

Week 10: Oct 26 – 30
Hydrologic cycle
Drought
Streams
Week 11: Nov 2 – 6
Streams
Lakes and wetlands
Groundwater
Week 12: Nov 9 - 11
Water, human impacts

Friday, Nov 13 Block 4 Exam

Block 5 — Earth

Week 13: Nov 16 - 20
Earth composition
Rocks
Plate tectonics
Week 14: Nov 23 - 25
Rocks
Streams
Coasts
Week 15 Nov 30 – Dec 4
Ice
Sand

Wednesday, December 7 Block 5 Exam (10:30 to 12:30 in ENV 130)

Accommodations: The University of North Texas makes reasonable academic accommodation for students with disabilities. Students seeking accommodation must first register with the Office of Disability Accommodation (ODA) to verify their eligibility. If a disability is verified, the ODA will provide you with an accommodation letter to be delivered to faculty to begin a private discussion regarding your specific needs in a course. You may request accommodations at any time, however, ODA notices of accommodation should be provided as early as possible in the semester to avoid any delay in implementation. Note that students must obtain a new letter of accommodation for every semester and must meet with each faculty member prior to implementation in each class. For additional information see the Office of Disability Accommodation website at <http://www.unt.edu/oda>. You may also contact them by phone at 940.565.4323.

Academic Dishonesty: Students caught cheating or plagiarizing will receive a "0" for that particular assignment or exam. Additionally, the incident will be reported to the Office of Student Rights and Responsibilities for further penalty. According to the UNT catalog, the term

"cheating" includes, but is not limited to: (a) use of any unauthorized assistance in taking quizzes, tests, or examinations; (b) dependence upon the aid of sources beyond those authorized by the instructor in writing papers, preparing reports, solving problems, or carrying out other assignments; (c) the acquisition, without permission, of tests or other academic material belonging to a faculty or staff member of the university; (d) dual submission of a paper or project, or resubmission of a paper or project to a different class without express permission from the instructor(s); or (e) any other act designed to give a student an unfair advantage. Altering a returned test and claiming a grader or scanning machine made an error is also considered cheating. The term "plagiarism" includes, but is not limited to: (a) the knowing or negligent use by paraphrase or direct quotation of the published or unpublished work of another person without full and clear acknowledgment; and (b) the knowing or negligent unacknowledged use of materials prepared by another person or agency engaged in the selling of term papers or other academic materials.

Acceptable Student Behavior: Remember that you have agreed to follow the UNT Code of Student Conduct. "Student behavior that interferes with an instructor's ability to conduct a class or other students' opportunity to learn is unacceptable and disruptive and will not be tolerated in any instructional forum at UNT. Students engaging in unacceptable behavior will be directed to leave the classroom and the instructor may refer the student to the Center for Student Rights and Responsibilities to consider whether the student's conduct violated the Code of Student Conduct. The university's expectations for student conduct apply to all instructional forums, including university and electronic classroom, labs, discussion groups, field trips, etc." Again, the Code of Student Conduct can be found at http://conduct.unt.edu/student_conduct.

Classroom Courtesy: Please follow these guidelines to avoid disrupting the class.

- (1) Turn off cell phones before arriving and do not text in class.
- (2) Do not arrive late or leave early (except for a bathroom break or emergency).
- (3) Do not sleep during class.
- (4) Do not work on other assignments during class.
- (5) Do not talk or whisper to neighbors (except for formal class interaction).
