A. LOGISTICS

INSTRUCTOR: Dr. Shaojie Wang, Adjunct Professor
Office: F101T, email: shaojie.wang@unt.edu

OFFICE HOURS: TBD

CLASS SCHEDULE: Tu 18:30-21:20, Room: F175

B. CATALOG COURSE DESCRIPTION

C. COURSE OBJECTIVES

1. Understanding the definition, scope and features of various geothermal heat pump systems
2. Understanding the design methods of exterior heat exchangers
3. Conducting engineering analysis for geothermal energy
4. Analyzing the geothermal heat pump applications: ground coupled heat pump, ground water heat pump, and surface water heat pump
5. Understanding the inputs and output of whole building energy modeling
6. Being knowledgeable about thermal imbalance and temperature penalty
7. Conducting a project-level design for a water-to-air heat pump system

D. RELATIONSHIP OF COURSE TO ACHIEVING MECHANICAL AND ENERGY ENGINEERING STUDENT OUTCOMES (MEEN 4800.001)

(a) Ability to apply knowledge of mathematics, science, and engineering
(d) Ability to function on multi-disciplinary teams
(e) Ability to identify, formulate, and solve engineering problems
Understanding of professional and ethical responsibility
Ability to communicate effectively
Broad education necessary to understand the impact of engineering solutions in a global and societal context
Recognition of the need for, and an ability to engage in, lifelong learning
Knowledge of contemporary issues
Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

E. PREREQUISITE KNOWLEDGE:

1. Techniques and applications of derivatives and integrals.
3. Momentum conservation in fluid flow.
4. Energy conservation in control volume.
5. Viscous flow characteristics.
6. Thermal conduction, convection and radiation
7. Computational skills using a mathematically functional spreadsheet such as Excel.
8. Understanding programming flow chart.
9. Conduct research using the literature database and web.

F. COURSE REQUIREMENTS:

General Plan
The class will focus on both understanding of concepts and problem solving. It will emphasize your figuring out things using your own mind, not simply memorizing what is in a textbook. On a typical day you will be given lecture on main concepts and typical problem solving methods. You will then be engaged in questioning and discussion in class for the problem solving practice. You are encouraged to assess and monitor your own progress using criteria and standards discussed in class. If at any time in the semester you feel unsure about your "grade", you should request an assessment from the professor.

The knowledge acquired through your learning experience in this course will be reinforced by a combination of written assignment, either from the textbook or from the professor, and class projects. Those assignments should follow the recommended format and reflect a logical reasoning of your thinking. At different stages of the course, an assessment will be given in a form of a written quiz. At the mid semester and near the end of the semester, a test will be given in place of a quiz.

You are encouraged to improve your performance, increase your strengths and diminishing your weaknesses.

Requirements
All students must complete all of the following:

1. Homework assignments. Due on Thursday of the following week unless announced in class.
4. Consistent classroom attendance and active participation (extra credit).

Grade Evaluation
The class will be graded based on a percentage and point system. Following weigh factors are applied to calculation of the final grade:

<table>
<thead>
<tr>
<th>Component</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASSIGNMENTS</td>
<td>20%</td>
</tr>
<tr>
<td>QUIZZES</td>
<td>20%</td>
</tr>
<tr>
<td>TEST ONE</td>
<td>20%</td>
</tr>
<tr>
<td>PRESENTATION</td>
<td>20%</td>
</tr>
</tbody>
</table>
CLASS PROJECT 20%
ACTIVE CLASS PARTICIPATION (for extra credit. A class roll will be circulated.) 5%
TOTAL 100% +5%

Class Policies

Each homework assignment gains a point (total points for the homework equal to the total number of assignments). The late submission after the due date but before the next class day gets a half point. No-submission within those days gets zero point. The final grade for the assignments is calculated as (No. of points/Total points) x 100% x 0.20.

Excusable absence from the quizzes is accepted only if the student informs the professor before the event such as illness and non-reschedulable prior appointment, or after the event, such as medical or other emergencies, within a reasonable time frame. In all the cases, academic honesty is expected.

Quizzes will be evaluated on a median average basis.

Grade Significance:

<table>
<thead>
<tr>
<th>GRADE</th>
<th>SCORE RANGE</th>
<th>GRADE</th>
<th>SCORE RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>100 - 90 %</td>
<td>C</td>
<td>69.9 - 55 %</td>
</tr>
<tr>
<td>B</td>
<td>89.9 - 70 %</td>
<td>D</td>
<td>54.9 - 40 %</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>&lt; 40 %</td>
</tr>
</tbody>
</table>

Dishonesty

Any form of dishonesty during the semester will result in a final grade of F for the course and a recommendation for expulsions to the Provost. No exceptions. Please avoid cheating or any other form of misconduct. If you are having personal problems, come and talk to the instructor.

G. CONTENTS:

1. Introduction to Ground-Source Heat Pumps
2. Equipment for Ground-Source Applications
3. Fundamentals of Vertical Ground Heat Exchanger Design
4. Applied Ground-Coupled Heat Pump System Design
5. Surface-Water Heat Pumps
6. Piping and Pumps for Closed-Loop Ground-Source Heat Pumps
9. Whole building energy modeling of GSHP System

3
### H. TENTATIVE SCHEDULE OF READING ASSIGNMENT

<table>
<thead>

* The reading assignments are approximate. It is possible that in-class adjustments are made.

** All the quizzes and tests will be administrated on Monday of the week.
