Key: na = information not available from manufacturer.

*From manufacturers' published information or calculated from manufacturers' published as fed values; all values are on a dry matter basis unless otherwise stated.

**Moist foods are best and ideally they should be offered at temperatures between 70 to 100°F (21 to 38°C).

***Dietary protein may need to be limited to one or two sources that the patient has not been exposed to previously. Table 31-5 contains foods with these characteristics.
