

BRING YOUR IN-ROOM VIDEO CONFERENCE SYSTEMS INTO DAILY USE

Enjoy a single, consistent user experience
driven by **Skype for Business**

JOIN, SHARE AND COLLABORATE FROM ANYWHERE

OneMeeting from Modality Systems brings your in-room video conference systems to life - and into daily use as part of your Skype for Business environment. No longer do video conferencing facilities need to go underutilised or only work in a silo'd environment.

Gone are the integration issues, scheduling problems and awkward interfaces. Now everyone can join, share and get things done, on any device, anywhere - even external video conference users.

The hosted OneMeeting service is designed for organisations seeking to create a single, consistent user experience driven by Skype for Business.

OneMeeting is low touch and simple to deploy. With meetings scheduled through Outlook in the usual manner, there's no learning curve for organisers or participants. Everyone can join Skype for Business meetings with ease.

Compatible with any SIP or H323 in-room video conference system, OneMeeting optimises existing investments, extends the value of Skype for Business and Office 365 licences, and reduces video conferencing support enquiries into your service desk.

Integrated, easy to manage and all based around Skype for Business, OneMeeting makes anywhere collaboration a natural part of everyday.

DELIVERING BUSINESS VALUE

OPTIMISE

Bring in-room video systems into everyday use, extending the value of Skype for Business & Office 365 licence investments.

SIMPLIFY

Eliminate disjointed user experiences and make in-room video conference facilities quicker and easier to use.

STREAMLINE

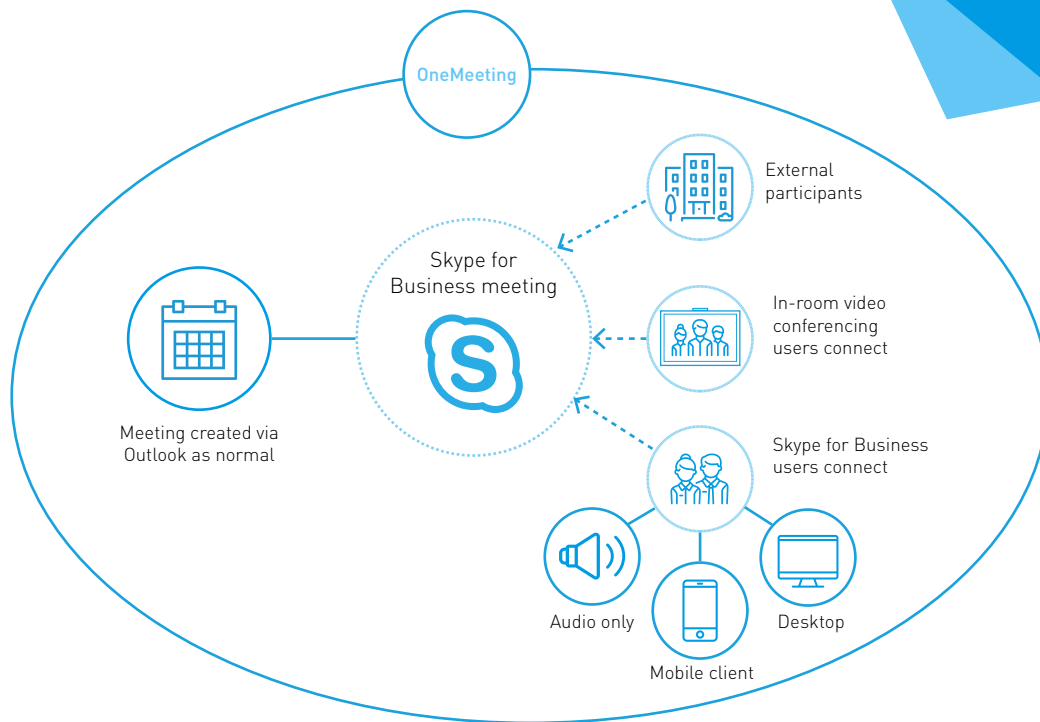

Reduce calls into IT support and help desks - freeing up valuable time and resource.

INTEGRATE

Extend the Skype for Business communications experience across all devices to build an integrated future.

SEAMLESS COLLABORATION

OneMeeting is designed to support today's flexible and increasingly digital workstyles - simplifying communications and extending collaboration across all your devices. It extends Skype for Business functionality to include any SIP or H323 video meeting room systems throughout your organisation.

HOW IT WORKS

OneMeeting brings together a hosted bridging platform for in-room video conferencing endpoints, and the OneMeeting Outlook plugin. This creates an invite with standard (client, audio, browser) joining details and a code for in-room conference users.

The meeting is scheduled in Outlook, and participants join in the usual way. If they choose to connect via an in-room video conferencing system users simply dial the unique access code.

The code is validated by the OneMeeting proxy server and users are connected into the correct Skype for Business meeting via the hosted bridging service. There's no need to pre-book conferencing rooms, and it all happens in seconds. Quick, simple and easy to use!

KEY BENEFITS

CONVENIENCE

No need to pre-book in-room conferencing room facilities.

EXPERIENCE

Familiar interface and single, consistent user experience.

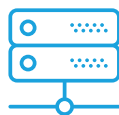

SPEED

Users don't need to learn different technologies.

AGILITY

Join from any device, anywhere – including in-room conferencing systems.

HOSTED

Simplifies the hardware estate, adds scalability and reduces demand on IT support.

OPTIMISED

Maximises in-room video conference investments, and Skype for Business.
