Barnett has been producing high-quality crossbows for over 50 years and they have sold over a million crossbows so far... supporting his claim to be the real leader in the manufacture and design of a quality arm spring. Barnett has been a pioneer in the spring hunting industry, with inventions such as Commando himself a cocking crossbow, the first combination of crossbow... The demon and their patented fast front end in their crossbows. They have taken up a lot of time and resources to develop high-quality springs built for hunting. Barnett has also provided quality youth bows for many years, and their latest addition is the focus of this review. In this field assessment, my daughter Sarah and I assess Barnett's Vortex; a versatile youth alloy spring with everything necessary to allow young people to start archery and archery sports. This youth archery spring also grows with a young archer. The draught weights can be adjusted from 16 to 45 pounds and offer young hunting enthusiasts the opportunity to learn and hunt in the forest. Adjustable traction modules are included in a quick and easy change in the drive length without pressing the bow. Barnett's new Vortex Youth Bow – Barnett Vortex Basics – We start with the basics of the vortex... including an overview of the features and accessories included in the package. Vortex is a combination spring for young people, containing everything a young person needs to start archery and bow hunting and grow with a bow. The bow included a plastic arrow support base, a 2-piece three-arrow vibration, three arrows and a 3-star fiber optic bow vision. The package also included 5 cam modules needed to adjust the length of the 21-27-inch draw every half-inch. Allen keys are included in the adjustments and settings. The vortex package can be used as a housing because the bow simply snaps into the locking columns of the package (see Fig. 1). The traction weight of the vortex can be adjusted from 16-45 pounds based on the combination of the module used and the position of the string (positive, neutral, negative). No bow pressing is required to change the tension length modules; However, changing the position of the string + or – in the cameroon requires pressing the bow. You can fine-tune the vortex to suit your youngster by adjusting the string position of the camkommers. When you place the string + on the beak, a 1/2 inch tens drive length and 2.5 pounds of traction weight are added to the vortex. When you set a string to -, a 1/2-inch drive length and 2.5 inches the tow weight shall be removed. Both beak poles must be in the same stud or the bow is 1/2 inch away anyway. The shape of the vortex grip is cast as a riser, and there are no pieces of plastic or wood on the handle. It feels good and feels just right for the size of younger hands as they advance through the early hunting age. There are no silencies in the vortex, but I recommend adding the silencers of string and limbs to hunting situations. Vortex has a one-part aluminiumlifter with split composite limbs. Dual cameras provide a flat tie with 60-70% let out. – The early installation – Vortex had all the accessories that your youth needs to get started in our great archery sport. I added a nozzle button, string D loop and installed the rest, vision and vibrating that came with the Vortex spring. My daughter wanted pink arrows, so the natural choice was the Victory Arrows' Pink Arrow 25/45, the official arrow of the Pink Arrow Project. The Pink Arrow project is about helping archers fight cancer, led by Mary Hale. You can read more about this project in the Pink Arrow Project. Victory's new pink arrows and Pink Arrow project Sarah also used the Pink Arrow Project's official broadhead, Sullivan Archery's pink 3-bladed 100-grain Innerloc model 3600 head. These fixed blade ends have a new blade alignment technology that is worth looking at. I did the usual initial installation to make sure the nocking point and rest were adjusted correctly, and I stained the middle shot with my Easy Eye Eze-Center Gauge meter. Next, the Vortex was paper-tuned and ready for my daughter Sarah to test the bow. Vortex has all the necessary accessories – Testing – My assessment started with an in-depth visual examination of the vortex for problems or defects related to the quality of work. During the inspection, I found no visible defects. Eccentrics moved freely when the pressure was removed from the strings and cables. All the parts fit perfectly together, nothing was loose and the bow and each of its components was mechanically healthy. I was pleasantly surprised by the quality of the vortex considering its price point and compared to other markets. The quality is much better than any youth I have seen at this price level. Sometimes you might just get more than you pay and that seems to be the case with the Vortex youth bow. – Shooting – We started with Sarah's basics, as she is just getting started in our great sport. We first practiced form and action (and remove the fear that a seven-year-old feels when he first shoots a bow). Once the vortex was adjusted to Sarah's tension length, weight and observations... He started shooting the bow repeatedly from a distance of 30 feet. Finally, over time, our way to 30 Head. This step quite a while, which was to be expected, but eventually he became comfortable and accurate during longer yards. All in all, Sarah was comfortable with the vortex quickly and shot the accuracy during the first week of practice. We focused on repetition and shape for several weeks for the first time in preparation for the hunt. During our exercise, Sarah used the vortex the whole time and got pretty good with the bow. I was able to gradually adjust his weight until he was able to comfortably shoot the kilogram necessary to successfully collect the deer with this spring, provided the opportunity acame. The vortex worked well for Sarah throughout our filming time. Thanks to adjustability features, he was easy to start with a low number of kilos and then even work to hunt for a pound (45 pounds is the min. poundage required for hunting in Pennsylvania). We found the Vortex to shoot accurately if Sarah did her part and stayed consistent. The bow was quiet, but I recommend adding limb savers and string silencers to hunting situations to make the vortex even quieter. At one point during testing, Sarah commented to me... This new bow is easy to shoot. This made it much easier to teach Sarah the basics of archery because she trusted that she could do it and do it well. The vortex allowed him to start slowly, but grew into hunting situations with a bow. I just wish the vortex was available to me when I bought the young bows for my two sons a year ago. I spent significantly more money on their bows and I didn't really get any more for my money. There's more adaptation in the vortex than in my boys' youthful springs. Easy drive length adjustment with modules Vortex is an excellent starting spring for young people, at a high price. Sarah loved this bow. He loved what it looked like and thought it was nice to shoot. What's important is that he was just having fun learning how to shoot with a vortex. The vortex's adjustability features made it easier to fit the bow to his needs, but also grow with him as he grows. We were all excited about her first hunt and unfortunately failed to take deer with the Vortex this year, but we're looking forward to next season when Sarah tries out her archery skills again with a whitetail using her new Vortex bow. Sarah aims for new Vortex Pros: high value, easy to adjust, space to grow Drawbacks: accessories could be upgraded to improve shooter consistency - Specifications - Only available in RH for mass weight only: 2.3 lbs. Traction weights: 16-45 pound peak Traction length: 21-27 inches (1/2 inches) Axis to axle length: 27.5 inches Support height: 7.25 lbs Let-off: 60-70% String: 51 16-threaded BCY B-500 Cable: 32 BCY DynaFlite 97 Finish: Camo Street Price: \$99.99 [check availability and current @Amazon] Don't forget to check out more of Keith Dunlap's posts or learn more about Barnett Youth Archery and the products they offer – buy existing Barnett products on Amazon, visit barnettcrossbows.com online, or check our sister site BowList.net more Bow links. vortex junior compound bowbarnett vortex peep sightbarnett vertigo manualbarnett vortex hunter mod chartbarnett vortex juvenile combination bow tie adjustment can barnett vortex vortex lite manualbarnett vortex arrow rest31 January 2012 He shoots Barnett vortex until he saves money on a new one.
