

Fogging of Concrobium Mold Control is the best method to kill and control mold and mildew in enclosed spaces and hard to reach confined areas.

100% natural and eco-friendly mold-fighting solution guaranteed to eliminate and prevent mold.

- Bedrooms
- Bathrooms
- Air conditioning & ventilation ducts
- Kitchens
- Closets
- Crawl spaces
- Living Rooms
- Storage Rooms
- Suspended ceiling cavities.

Applying Concrobium Mold Control with a cold (ULV) Fogger is an effective way to eliminate mold and musty smells in large or inaccessible spaces. Our fogging service evenly mists Concrobium Mold Control to saturate the air in the enclosed environment, and evenly coat all surfaces.

The fine mist will kill all airborne mold spores (what you smell as that "musty" smell). The patented formula crushes mold below the surface and leaves behind an antimicrobial film that prevents future mold growth. Concrobium contains no bleach, peroxide or other harsh chemicals.

After our treatment services, the area can almost immediately be occupied, including children and pets and any others that may have sensitivities to harsh chemicals.

Frequently Asked Questions

After the fogging how long until the musky smell goes away?

The musty smell should begin to dissipate immediately after fogging, and once the fogged Mold Control has dried the mustiness should be eliminated. Fogging Mold Control knocks down airborne mold spores. Musty smells originate due to the presence of viable mold, so once Mold Control has dried and killed the mold the mustiness will be gone, provided all sources of mold have been contacted.

How often would a repeat or maintenance fogging be required?

If the area is air conditioned another fogging application may not be required for a considerable period of time. But with the consistent high humidity in Panama, the knowledge that mold spores are a naturally occurring phenomena and that conditions will be variable for every unique location we can only suggest that a regular maintenance schedule will develop after some trial and experience. We'd suggest to plan for one year but recognize that for your unique situation you may need to re-fog in six months.

Will mold stains from cushions and drapes be removed?

After the fogging you might expect for to see that light surface stains may be gone, but further washing may be required for some articles. Oxyclean or Concrobium Mold Stain Eraser work well. A light handspray of Concrobium Mold Control after washing will leave an antimicrobial film that will prevent future mold growth.
