

Harnessing IUCN tools, knowledge and networks for biodiversity knowledge management, capacity building and technical and scientific cooperation

Why capacity building and knowledge management?

Targets 20 and 21 of the Kunming-Montreal Global Biodiversity Framework (GBF) emphasise the importance of capacity building and ensuring access to the best available data, information, and knowledge. The draft Knowledge Management Strategy and updated Clearing-House Mechanism (CHM) work programme are essential to equip Parties and stakeholders with the tools to effectively implement the Biodiversity Plan, they will be covered under COP agenda item 12. The event will showcase how IUCN tools and initiatives support GBF implementation in this domain.

Discover IUCN tools and initiatives

Learn about IUCN-led capacity building and knowledge management initiatives such as IUCN Academy and PANORAMA – Solutions for a Healthy Planet. Explore their crucial role in GBF implementation and how CBD Parties can leverage them for NBSAP processes. We will also discuss how IUCN is partnering with regional organisations to host Technical and Scientific Cooperation (TSC) centres.
