Founder & Director

DILIJAN URBAN DESIGN FRAMEWORK

The framework regulates the city's visual identity while reinforcing its ecological character.

LIGHTING

Dark Sky principles, $\leq 3000K$, full cut-off fixtures, no upward spill; no lighting along waterfronts and habitat edges.

STORMWATER

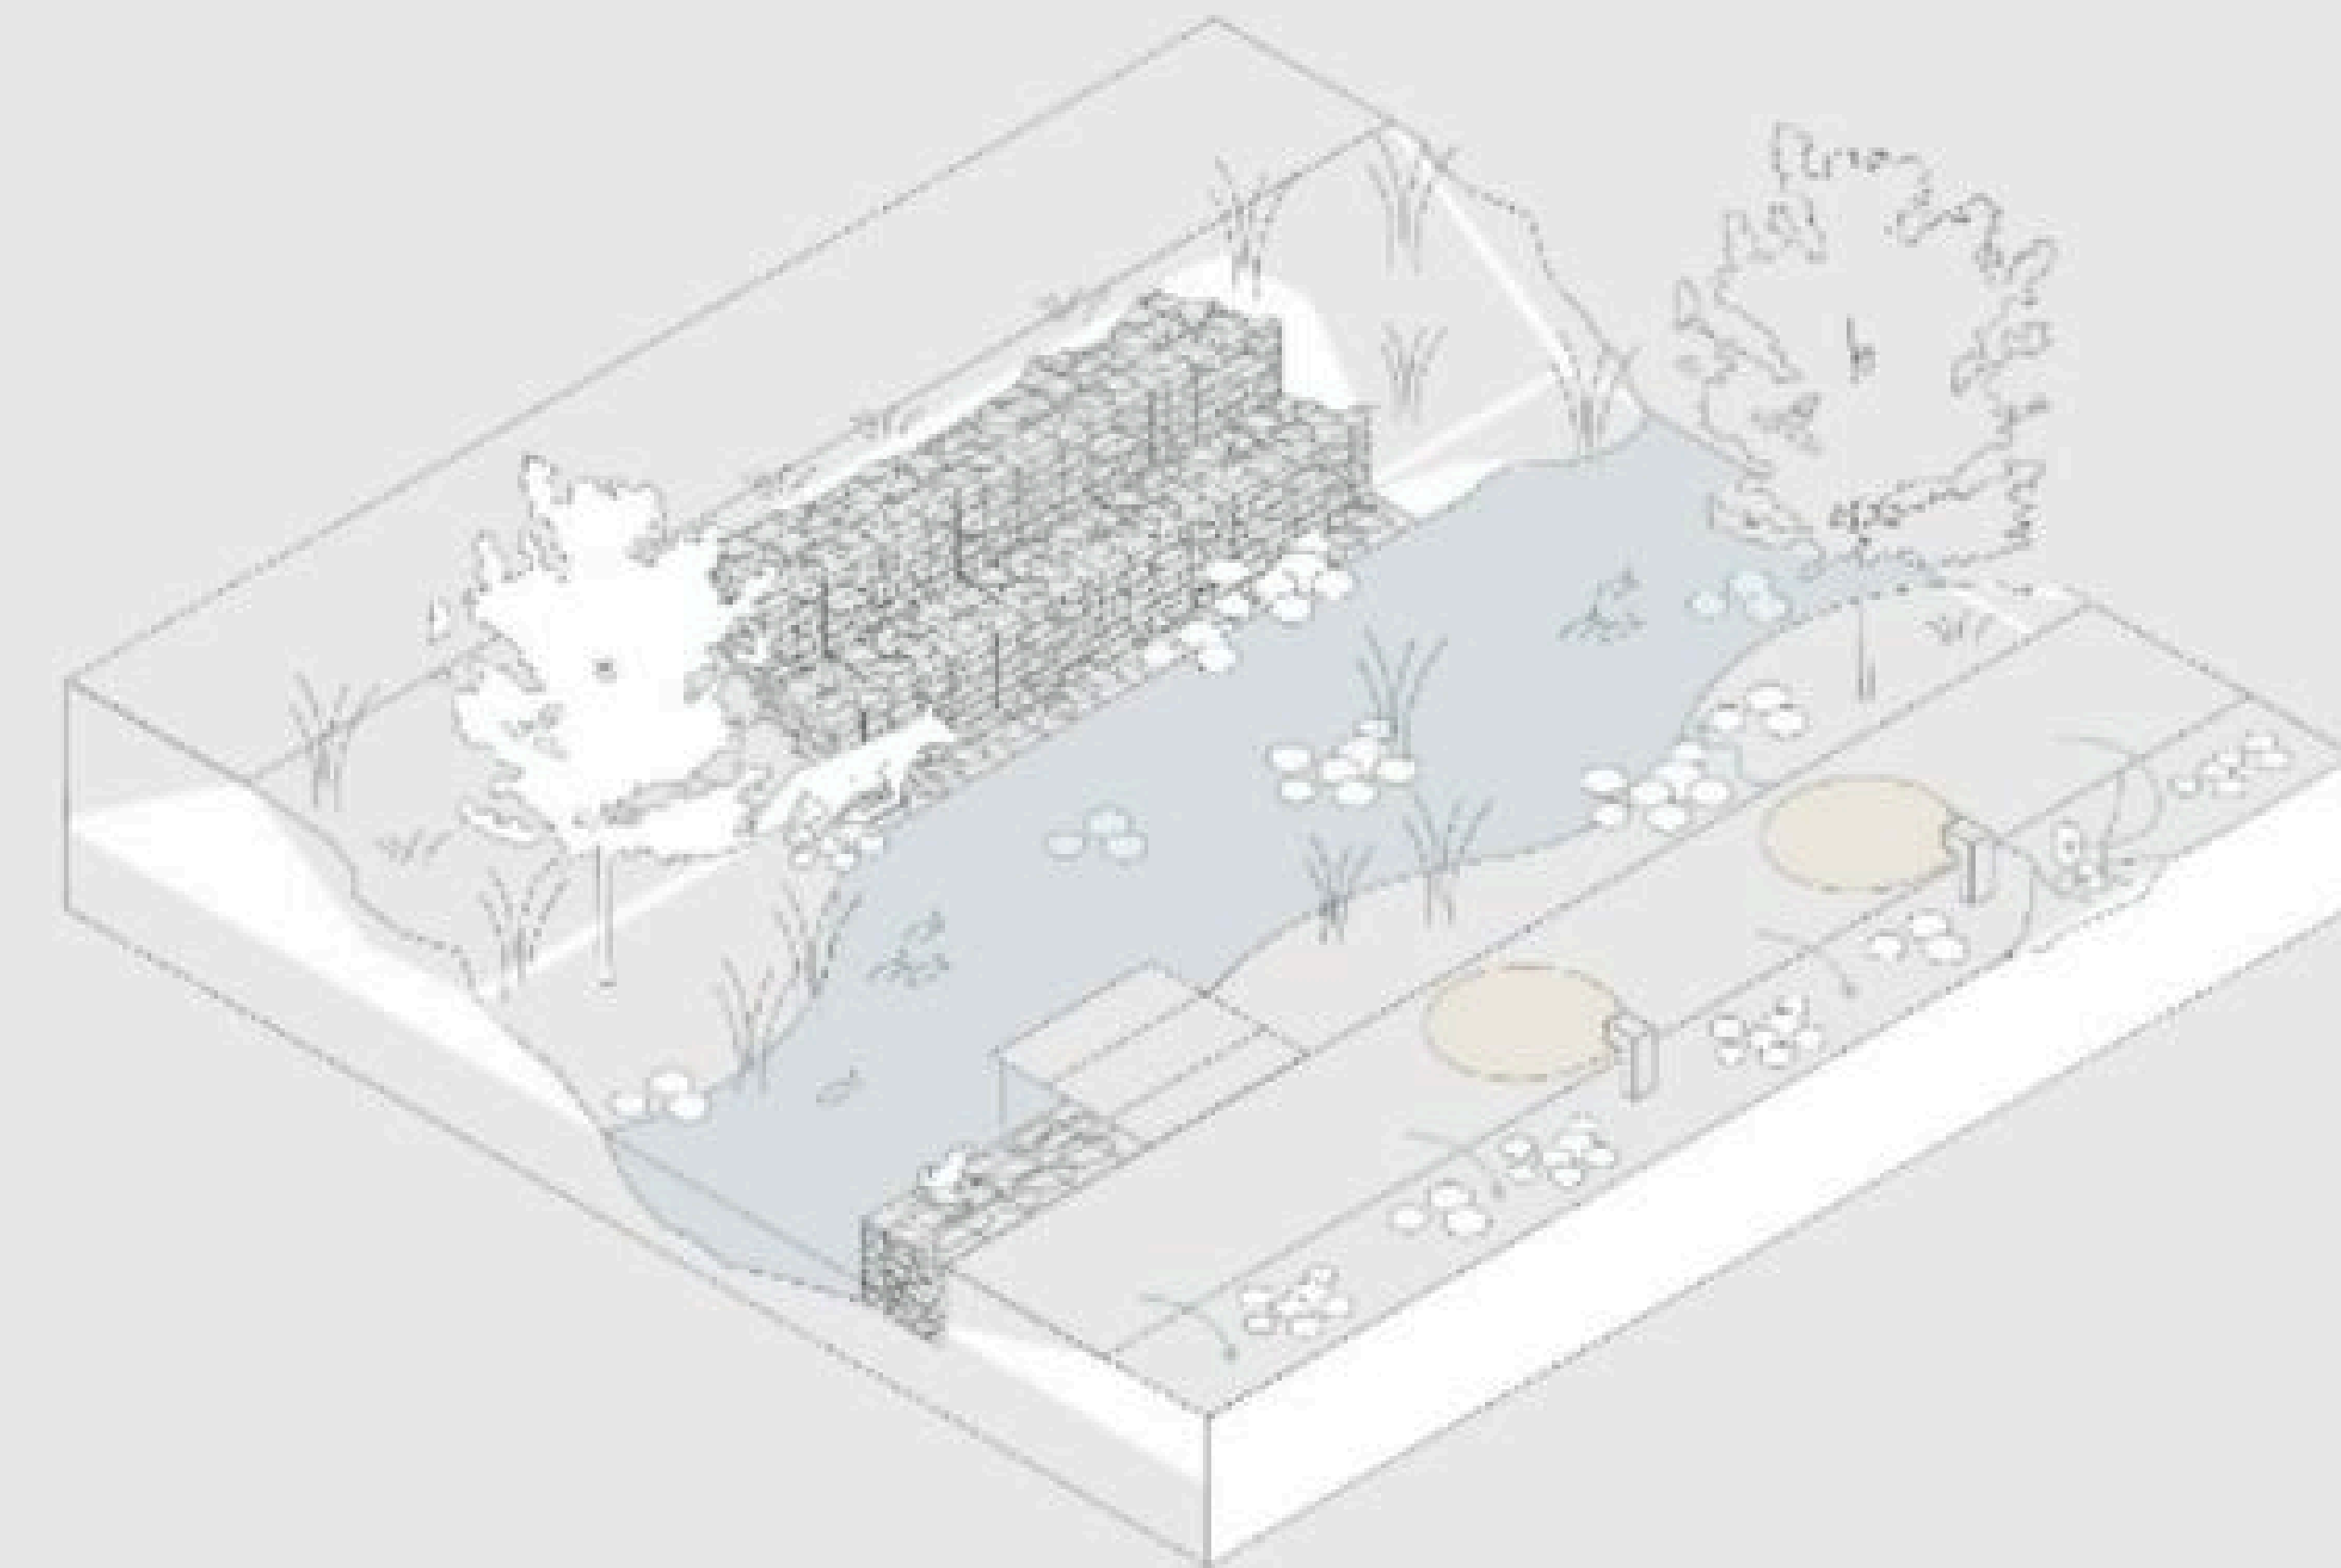

- Natural infiltration and evapotranspiration, with no added load on engineered drainage systems
- Wildlife movement
- Safer crossings and reduced human-wildlife conflict within migration routes.

SPECIES STRATEGY

Habitat support for beneficial species, design-based deterrence for conflict-prone species, and non-lethal pest control.

ENVIRONMENTAL EDUCATION

Playgrounds and public spaces integrate ecological learning from early childhood.

THANK YOU!
