

Davis to Lead Mooreville Technology Department

The Mooreville Schools Board of Directors approved the appointment of Kyle Davis as the next Director of Technology for Mooreville Schools.

“I’m very excited for this opportunity,” said Davis. “I look forward to serving our school corporation as we continue to build our technology programs.”

Administrators recommended Davis at Tuesday evening’s School Board meeting.

“We are thrilled to be able to promote Kyle Davis as our new Director of Technology. His experience in our district as well as his knowledge of technology will continue to move our district forward,” said Superintendent Dr. David Marcotte.

Davis has been with Mooreville Schools for the past six years, serving as a desktop support specialist and then a systems administrator. In his time at Mooreville, he has been involved with the implementation of the district’s one to one program, managing the virtualized server environment, overseeing district security system hardware and software, and managing more than 5,000 user accounts through various software upgrades. He earned his degree in Computer Science at DePauw University. Since that time he has continued to complete technology coursework in a variety of areas, including networking, virtualization, and storage infrastructure.

“My goal is to continue to keep Mooreville Schools progressing with technology that supports our thousands of users in the best way possible.” said Davis.
