Or they might just not recognize his name. How a name a cat could change over the years. My first cat was named Kitten, and since then, things have improved. Not for kittens - he's dead. But he lived a good long life, though he didn't seem specifically connected to what humans called him. Now I have to do with P-G. Wodehouse is the name of your cats after the characters. It turns out this is also a bad idea, cat guru assistant Vancouver Vet. If you haven't seen a YouTube video by veterinarian Dr. Uri Burstyn yet, you're in for a treat. His simple and relaxing clip explains everything you've ever wanted to know about your kitty, and in this one he makes a very solid case for how to get a cat's attention: basically, chirping like a bird and squeaking like a mouse. Using your cat model Lancelot as an example, Dr Burstyn explains that cat's ears To recover high stands have evolved tuned to hear noise. Lancelot doesn't really answer his name, because the emphasis on the last letter doesn't end. But LAN-Ceyl Gets a comical response from the very relaxed feline. It may be that you instinctively know your cat Answer a squeaky ee sound. This is probably why kiten eventually became Kitty, and why Burt and George (my current fuzzy bois) are now Bertie and Georgie. You can't let your cat pay attention to you all the time, but you can definitely see it your direction if you're shocked in loud enough screams. Feb. 11 is the United Nations International Day of Women and Girls in Science. One day science highlighted gender imbalance, and is designed to celebrate the achievements of female scientists, both past and present. While a lot of people may have au fait with the likes of Marie Curie and Rosalind Franklin, there are too many names that are rarely given headlines. So here are a few more female scientists to remember. Their names desperately need to be added to the history books, if recent research is anything to go by. A poll launched by the charity Teach First found that only half of the British public could name a female scientist. And when asked by the first scientist's name that pops up in his mind, less than one in 10 named a woman. If it wasn't enough to get you angry, the first also found that gsc science is not a single female featured in the national curriculum. (This isn't surprising, considering many prolific scientists easily forgot to credit their female colleagues in their work.) But sadly, women are still underrepres represented in science today. Less than 30% of scientific researchers are female and still lack women in areas such as engineering and computer science, CNN reported. With the following names (and much more where they came from), there is no excuse for people not to reel off a list of complete female scientists. Note and remember. Born in China in 1930, Tu Youyou went on to discover a cure for a disease that has killed millions of people: malaria. While poring over traditional Chinese texts, Youyou and her team noticed that wormwood was used to treat one of the symptoms of malaria, CNN reported. Youyou volunteered the first human substance her team had extracted in the 1970s to test. Despite 240,000 compounds failing to cure the disease at that point, her theory worked. Now, his quest has saved millions of lives, he is the recipient of a Nobel Prize, even all without doing a medical degree. [Bloomberg/Bloomberg/Getty Images](#)73-Year-old Shirley Ann Jackson has achieved many firsts, according to the New York Times. She was the first black woman to receive a doctorate from MIT, and one of the first two African American women to receive a physics doctorate at U.S. Plus, she holds the title of first African American woman to helm a national research university. Once qualified as a physicist, Jackson is branching out into teaching the next generation and has long been a one in the stem field to women and minorities. is encouraged to consider. CRISPR allows the addition and removal of genetic material, and could fight a number of genetic diseases, according to the Guardian. Despite controversy over the technology being used for design babies, Doudna's work has already been used to treat people with cancer and blood diseases, the Financial Times reports. Treatment of rare liver and eye diseases are set to be tested in 2020. [Colin McPherson/Corbis Entertainment/Getty Images](#)Astrophysicist Jocelyn Bell Burnell was overlooked by the 1974 Nobel Prize Committee when his male co-researchers were awarded the prize for making a great discovery. Bell Burnell also discovered radio pulsars - the products of supernova explosions that make all life possible, according to the BBC - but were not recognised until 2018. That year, he was awarded the £2.3 million Success Prize, the Guardian reports. Instead of keeping the money, she donates it all to fund women, refugees, and other minorities who want to become physics researchers. So Garrett Anderson found a way around it. She became a nursing student, eventually teaching herself French and receiving a medical degree in Paris. Although Britain refused to recognise her new doctoral status, she set up a hospital fully staffed by women. In 1876, women were eventually allowed into the profession. [Ullstein Bild/Ullstein Bild/Getty Images](#)Another Forgotten Female Talent, Austrian physicist Lise Meitner explained how nuclear fission — the process that paved the way for nuclear bombs and power plants — was possible in 1939, the conversation states. However, her male academic partner, Otto Hahn, was fully awarded the Nobel Prize in 1944 partly because Meitner was living as an exiled Jew at the time and was not included on Hahn's research paper. Her achievements were not recognized until two decades later, the conversation reported. Ellis Ball was the first woman and the first African American to receive a master's degree from the University of Hawaii, AS CNN reports. The chemist, born in 1892, helped discover leprosy treatment at the age of 23. The treatment, which allowed people to easily inject an existing oil, was the most effective treatment for the disease by the 1940s. However, Ball died before he could publicize his findings. Her university president took credit for her work, and her efforts were only mentioned in a 1922 journal, per National Geographic. Thankfully, someone saw it. Now, known as Alice Ball Day in February 29 [Beck/AFP/Getty Images](#)Jane Goodall is one of the world's most famous primatologists, and has spent nearly six decades working in conservation. In 1960, he joined a friend in Kenya, according to the Guardian. With no training, he met a scientist and began the journey of chimpanzee discovery. In a forest in Gombe, Tanzania, Goodall drowned himself with a chimpanzee and noted to the first person that primates made and used tools. Since that discovery, The National Geographic reports, the now 85-year-old has started several chimpanzee sanctuaries, mentoring upcoming scientists, and advocating for conservation wherever he goes.
