Demon Eyes appear most often during a new moon. Although the dilated eyes variant seems to have a large, black daughter, its drop rate for black lenses is neither guaranteed nor raised. Tips[editing | source editing] Demon Eyes are trying to fly straight to the player. This allows for relatively easy hiding behind a wall. Due to the fact that they cannot enter the water, they cannot reach the player if it is completely submerged. However, they can still hit them with their broadsword or any weapon that ranged. New players may find that spear-type weapons are quite effective against these enemies. It is also recommended to use weapons ranging, such as the Wooden Bow, when dealing with Demon Eyes, as they spend much of their time away. The best time to attack is when the Demon Eye turns, as a successful hit will hit back and interrupt its flight pattern, allowing the player to take more shots before reaching them. If the player swings in a different direction each time with his sword, they can effectively trap a Demon Eye with a knockback in the range of his sword, as the sword will hit it the way the player treats it. Halloween Demon Eyes: No one knows who dressed these demon eyes up in cute costumes, but the whole process hasn't made them any friendlier.
