

Q-Filtering Software Installation Guide

Installing the free Q-Filtering Software that came with your purchase of One Minute Free Traffic is easy! All that is required is a web hosting service. Here is how you do it.

Step #1: Login into cPanel

From your web host, log into your cPanel dashboard. Using [a2Hosting](#), all I need to do is click a button after I login labeled cPanel Login.

Step #2: Click File Manager

Once you're logged into cPanel, click on the File Manager link. (Note: You can also use any free FTP software to upload these files to your web host, such as [Filezilla](#).)

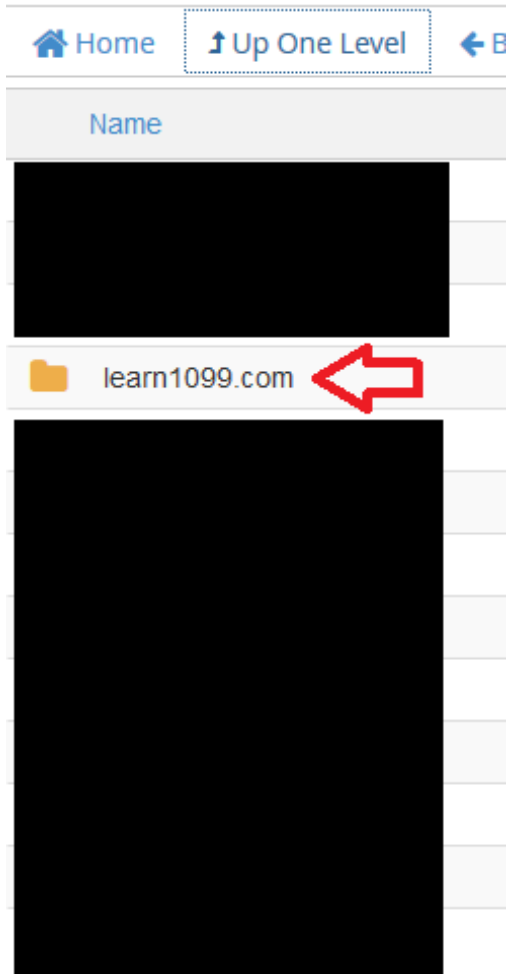

Step #3: Go to the folder public_html

Once you're in the file manager, scroll down to public_html, which is where all of your websites are typically listed.

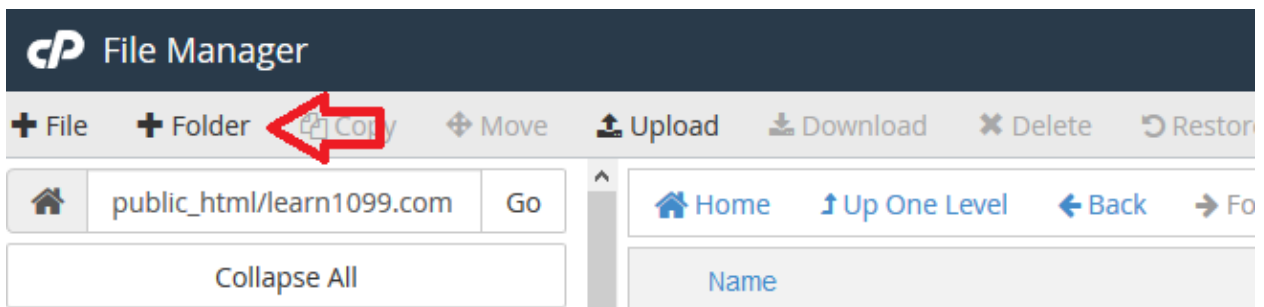

Step #4: Go to the folder of your website.

Next, double click on the folder of the website that you want to upload the software to. For this example, we're going to choose our Learn1099.com website.

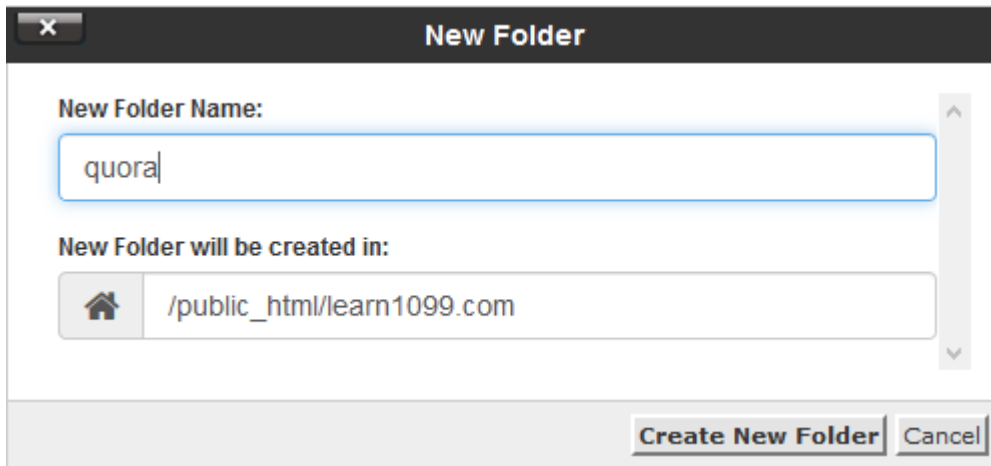

Step #5: Click the + Folder button in the upper left-hand corner.

Next, create a new folder by clicking the + Folder button.

Step #6: Enter a name for your folder.

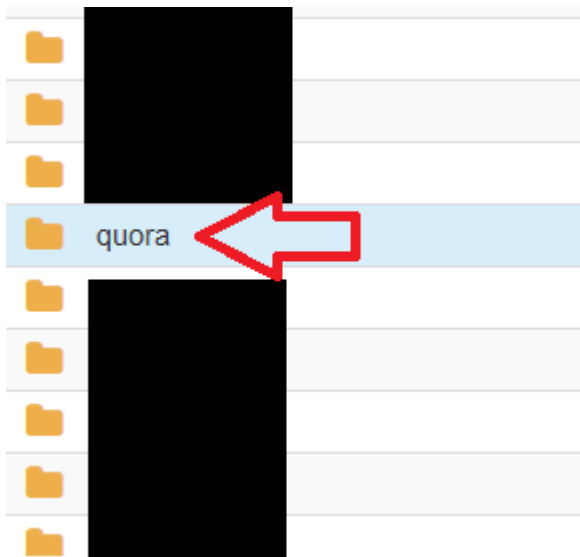

Enter any name for your folder, such as quora, then click Create New Folder.

A screenshot of a 'New Folder' dialog box. The title bar is dark gray with a close button (X) on the left and the text 'New Folder' in the center. The main area has a light gray background. It contains two input fields. The first is labeled 'New Folder Name:' and contains the text 'quora'. The second is labeled 'New Folder will be created in:' and contains a home icon followed by the path '/public_html/learn1099.com'. At the bottom right, there are two buttons: 'Create New Folder' and 'Cancel'.

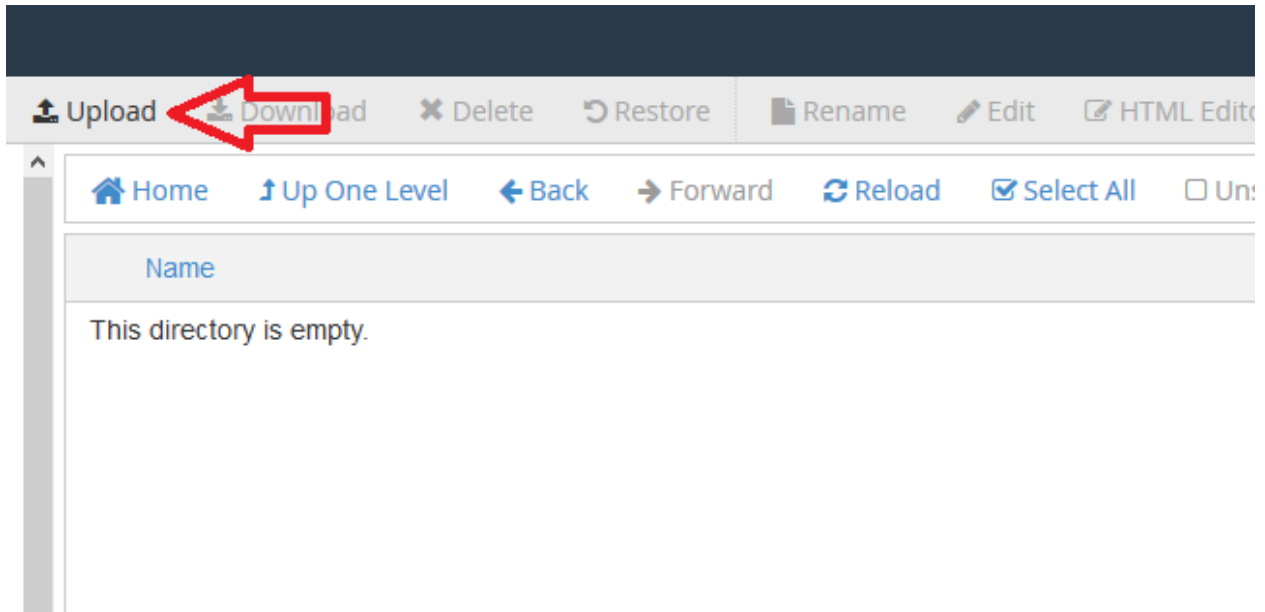

Step #7: Double click on the name of your folder.

Navigate to your folder by double-clicking on it.

Step #8: Click the upload button.

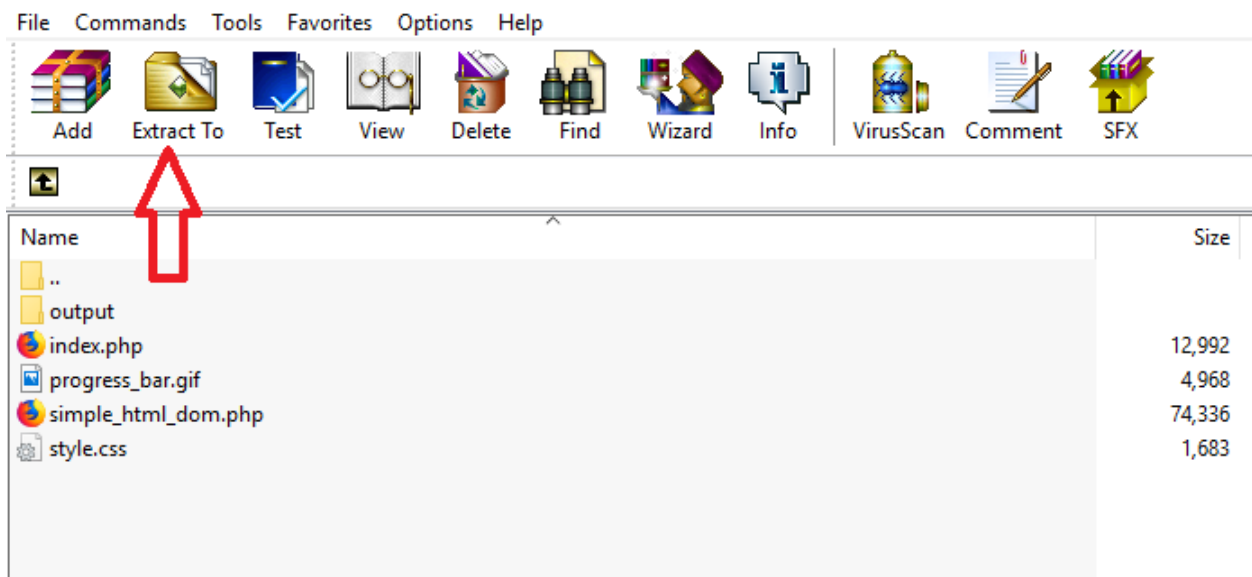

Your folder should be empty. Click the upload button.

Step #9: Open the .zip file with the software.

Double-click the .zip file with the software to open it, then click the Extract button to add the files from the .zip file to your computer, then click OK. The files will be in a folder called **quora-final**. (If you are on a Mac, the files may automatically extract.)

Note: If you do not have an unzipping program, I use a program called [WinRAR](#) to unzip files.

Step #10: Go to the quora-final folder, select all files, and drag and drop them.

Single-click the top file (labeled index), hold SHIFT, then click the bottom file to highlight all the files (except for the output folder). Drag and drop them to the upload page that is open in your browser.

Step #11: Click the “Go Back” button below.

Step #12: Click the “Add Folder” button again.

Step #13: Create a new folder named “output.”

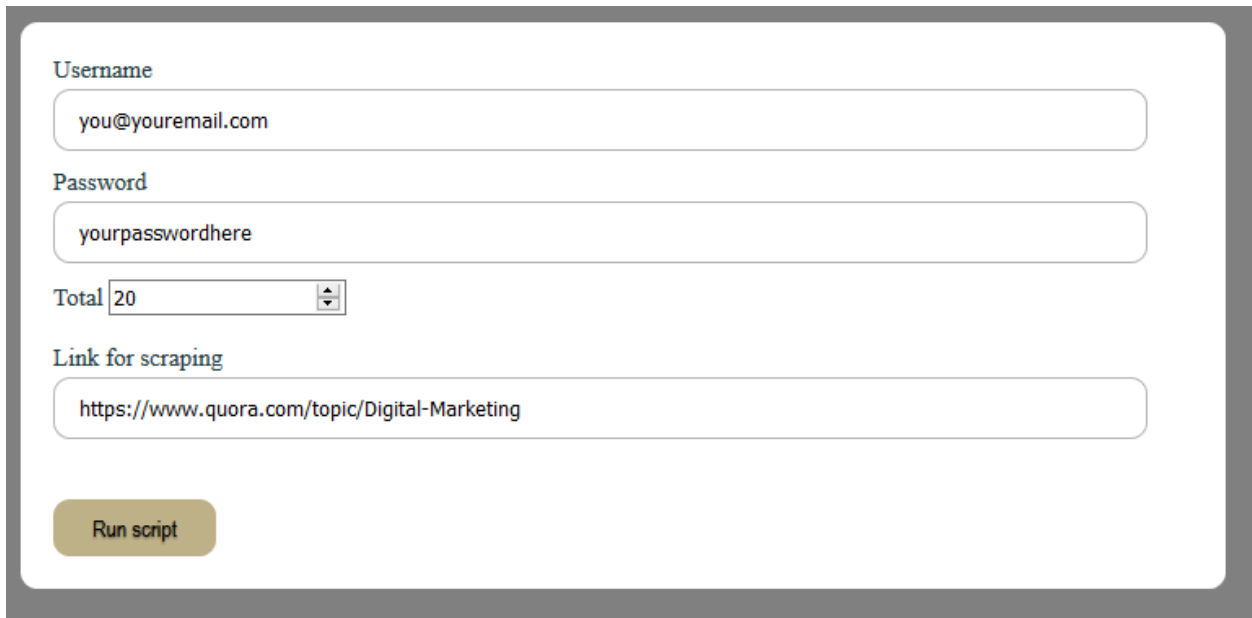

Step #14: You're ready to use the Q-Filtering Software!

In your web browser, in this example, you would go to:

<http://learn1099.com/quora>

And you should see this screen:

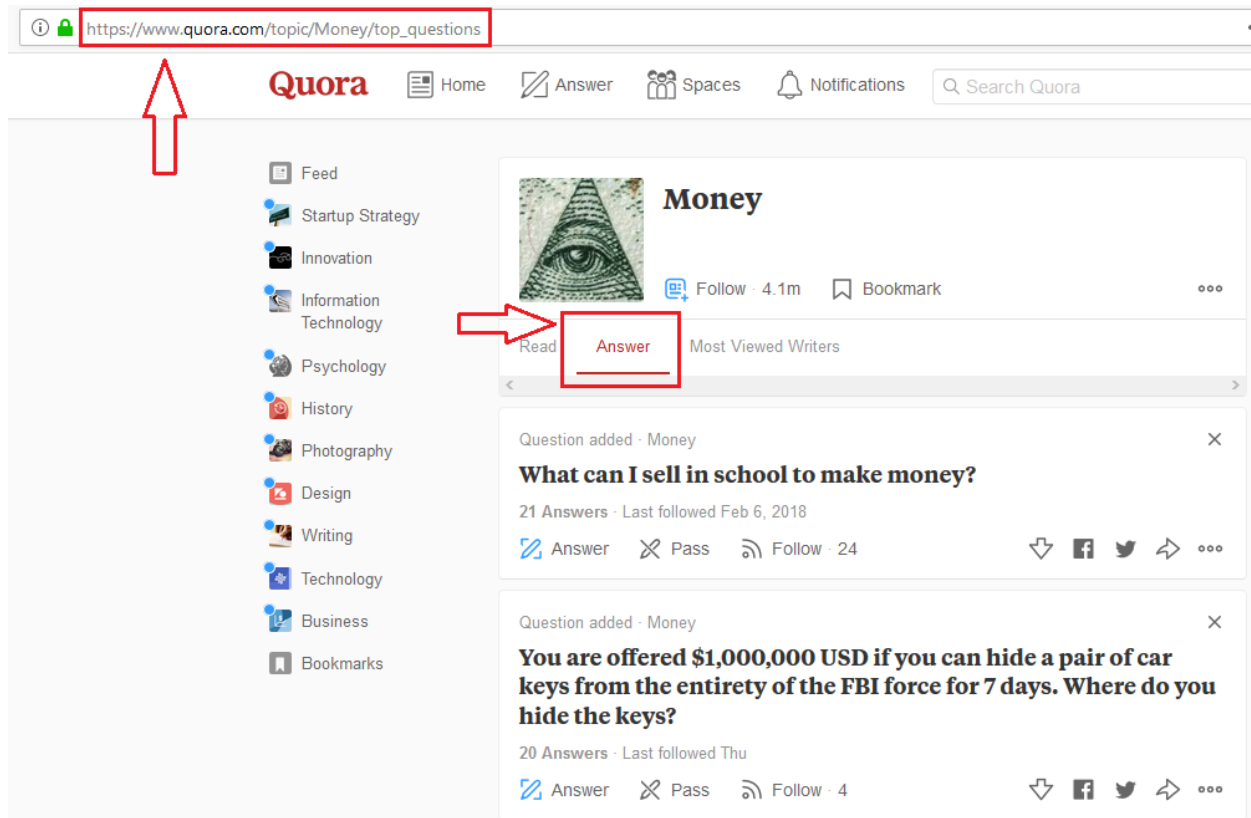

The screenshot shows a web form for the Q-Filtering Software. It has a light gray background with a white rounded rectangle containing the form fields. The fields are: 'Username' with the placeholder 'you@youremail.com', 'Password' with the placeholder 'yourpasswordhere', 'Total' with a dropdown menu showing '20', and 'Link for scraping' with the placeholder 'https://www.quora.com/topic/Digital-Marketing'. Below these fields is a yellow button labeled 'Run script'.

It will give you an overview of the number of views, answers and follows so you can very quickly determine which questions are worth it for you to answer based on the training shown in One Minute Free Traffic.

This is an example of a URL to search from for the topic of "Money":

https://www.quora.com/topic/Money/top_questions

To get to this page, search for your topic of choice, click "Answer," then copy the URL and enter it into the tool, like this:

Please note that you should NOT overuse this software, or your web server may get banned from Quora and prevent you from filtering results.

Although we have throttling built-in to help prevent Quora's servers from being hit too often, you are using this software at your own risk and we cannot take responsibility if your Quora account or your web server gets banned. We strongly suggest limiting your results to **20 or less**, and to limit your uses of this script.

Congratulations again on your purchase of One Minute Free Traffic! We know you will get great use out of this powerful traffic system.
