

Your Own Podcast App

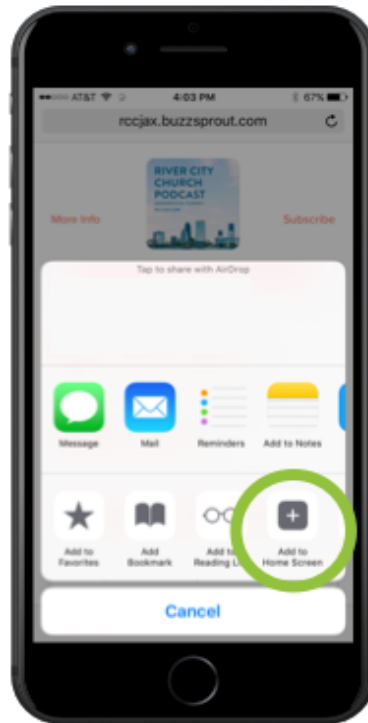

Your Buzzsprout site functions as a mobile App on your listener's devices. Simply use the Add to Home Screen feature on iOS and Android devices and presto! Your own app; zero setup or maintenance required.

On iOS devices (iPhones, iPads, iPods)

1

Visit your Buzzsprout site URL and tap the Share button at the bottom of the Safari screen.

2

Tap the icon labeled "Add to Home Screen."

3

Tap the Add button in the upper right corner.

4

That's it. Now you can launch your podcast directly from an iPhone just like an app.

ANDROID INSTRUCTIONS ON BACK OF THIS PAGE

Your Own Podcast App

Newer Android devices

1. Navigate to your Buzzsprout site in Chrome
2. Slide out option menu in Chrome
3. Find the "Add to home screen" option towards bottom of list
4. You will see the app icon being placed on your home screen

Most Android devices

1. Bookmark your Buzzsprout site URL in your browser
2. Go to the home screen you want to add the App to
3. Long-press any empty space to get the "Add to Home Screen" menu
4. Select "Shortcuts"
5. Select "Bookmark"
6. Choose your bookmark!

How can I get it?

Just follow the steps above! There's no separate fee or interface for you to manage.

In fact, there's nothing to manage at all. It just works. You keep publishing your episodes, and your listeners simply install the App directly from the web and receive your latest updates the moment they go live.

How does it work?

Buzzsprout has created a sleek mobile version of your podcast's public website. Even though it's a mobile version of a real site, it's built to look, work and feel identical to a traditional App. To install the App to a home screen, the user simply uses the smartphone's "Add to Home screen" option and the mobile site is installed on their home screen.
