Access, program and control any ADEMCO security system.

Compass

DOWNLOADER

Compass WINDOWS® Compatible Network Downloader

Works with all ADEMCO Group controls

Compass Downloader for Windows Software takes security system programming to a whole new level. Designed exclusively by ADEMCO, this network compatible software provides a quick and easy method for planning, designing and communicating with the Control Panels. With Compass Downloader for Windows, you can also upload system programming that has been manually entered into the panel, or previously downloaded.

By using Compass Downloader for Windows, programming can be performed at the office prior to installation, or can be downloaded from a PC Laptop with an ADEMCO 4100SM Serial Module (where the control panel supports it).

Compass Downloader for Windows' menu-driven format makes it easy to learn and use!

PROGRAM FEATURES

Change/History
The Compass change feature reviews all system changes initiated by the download operator within the current session. A complete record of system modifications and the history of an account is also available.
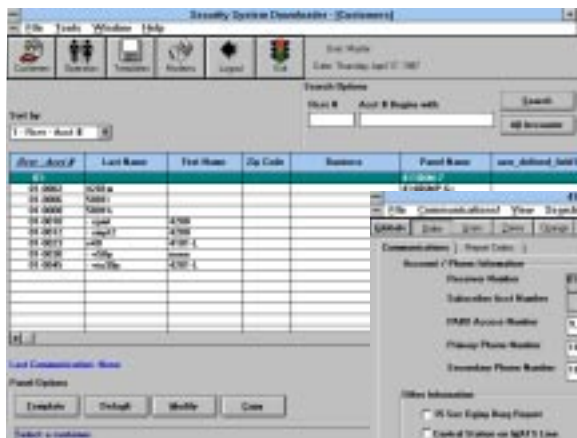

DOS Conversion
With Compass, DOS conversion is seamless. Compass makes a copy of the existing DOS database and converts it to the Windows format.

Error Check
Distinct technology incorporated into Compass guides you through system programming. To ensure proper panel set-up, an error checking feature monitors programming and provides on-screen error alerts.

Help
An on-screen help bar is displayed along the bottom of each screen for prompt assistance.

Actual screen shots.

Programming field numbers within each screen provide easy reference to the program sheet for installation and service.

Networkable
Completely network compatible, Compass is engineered to accommodate up to 255 users. Multiple users may access the program and download simultaneously. Compass runs on Peer-to-Peer and LAN based networks such as Novell® and Lantastic®. Each workstation can support its own modem.

Search Engine
This new search engine allows quick and easy access to panel features. Simply type the desired feature name or the programming field number and the system will bring you directly to the appropriate screen, folder and feature location.

Templates
Unlimited templates allow for design of master accounts which result in a selection of options to expedite set-up.

User-definable fields
With user-definable fields, you have the option to customize your accounts screen. Gather and display the information most important to your company.
