

We are excited about implementing the Accelerated Math program at TCS for students in grades K-8. Most of you are already familiar with the Accelerated Reading program that we currently utilize and how it is designed as an enrichment program to help students improve their reading ability.

Accelerated Math serves as an instructional resource that supports math achievement including those students who struggle with mathematics. The program offers math practice for students working on grade-level skills and supports students who need to work on foundational skills.

The teachers are in the process of receiving training so they will know how to best utilize the program for the benefit of their students. They spent 2 ½ hours last Friday to begin the process of understanding this new program. Accelerated Math will be implemented in steps as teachers continue to acquire the necessary professional development to maximize the program for their students.

We look forward to seeing our students continue to achieve academically and we are especially excited about the advantage Accelerated Math program will provide for our overall mathematics instructional program.
