2311 Glendale Avenue,  
Hattiesburg, MS 39401
  - Text FBCGlendale to 73256
  - Online at our website: [www.firstglendale.com](http://www.firstglendale.com)
- (If you give online, please consider adding the cost of processing the payment with your gift.)

### *Did You Know...*

- A piano keyboard has 88 keys. The number of strings depends on the model, but is usually around 230. Upper notes have three strings, bass notes have two, decreasing to one string for the lowest notes.
- Piano tuning takes 1-4 hours depending on how much the strings need to be tightened. When properly tuned, there are about 18,000 pounds of pressure on a piano harp.
- French Horns have about 12-16 feet of tubing. This means that a French Horn is almost as long as three trumpets! it is even longer than a trombone fully extended. The French Horn's valves are played with the left hand.
- The organ mentioned in the Old Testament probably referred to a wind instrument where the sound was produced by blowing through tubes or pipes of wood.
- The earliest known keyboard organ was the hydraulis of the 3rd century bce, a rudimentary Greek invention, with the wind regulated by water pressure. The first recorded appearance of an exclusively bellow-fed organ, however, was not until almost 400 years later.
- The tuba and sousaphone are different instruments. They both play the same notes but the sousaphone is used in marching bands whereas the tuba is used in orchestras, symphony, concerts, and brass ensemble.
- Among the instruments of percussion, the timbrel or hand-drum ("tof") is the oldest and most popular. It is very simple, consisting of a broad or narrow hoop of wood or metal over which the skin of an animal is stretched. We call it a tambourine.
- Daniel 3:5 names these musical instruments: cornet, flute, harp, sackbut (trombone), psaltery, dulcimer. There are others mentioned in the Bible.
- The timpani are the only drum instruments that can be tuned to a specific pitch.
- Some throat singers can produce four tones simultaneously.
- While 20 to 20,000Hz (vibrations per second) forms the absolute borders of the human hearing range, our hearing is most sensitive in the 2000 - 5000 Hz frequency range.
- The human voice consists of sound made by a human being using the vocal folds or cords, including talking, singing, laughing, crying, screaming, shouting, or yelling.
- 1 in 10,000 people have absolute (perfect) pitch.

**Thousands and thousands of years have passed since the first mention of music or musicians in Scripture, but it is still important for us to "Make a joyful noise unto the Lord.**

**Come before His presence with singing."** (Psalm 100)

(Above information gathered from various internet sites..)
