TEST REQUESTED

EndoPredict - a gene expression test to determine the likelihood of distant cancer recurrence up to 10 years after invasive breast cancer diagnosis. Reported 10-year recurrence risks are based on analysis of a cohort of post-menopausal women with resected ER+/ HER2- invasive female breast cancer who have NOT been treated prior to resection with systemic neo-adjuvant therapy (e.g., chemotherapy, radiation therapy or endocrine therapy) and who do not have a current or prior diagnosis of an additional cancer. Risks may differ for individuals who do not meet the aforementioned clinical characteristics. This test is not appropriate for patients who have already experienced a distant recurrence.
