

CUSTOM DATA FILE **PROCESSING**

Myriad RBM's Biomarker Testing Lab:

CLIA Certified – ID # 45D1037483

Supports GLP Studies

MyriadRBM.com

STANDARD

Myriad RBM provides two standard options for providing result data:

- ▶ Myriad RBM typically provides customer biomarker results in our standard report format, an Excel® spreadsheet that lists the data by sample for every assay, along with units, LDD, LLOQ, and an analyte range when available. An example of this report can be viewed by visiting our website at www.myriadrbm.com/products-services/updated-report-format. Data is transmitted via email to the recipient(s) listed on the sample submission paperwork.
- ▶ Upon request, Myriad RBM can provide result data in a flat, vertical format, more conducive to database processing where each data row represents a single result. The data file is a text file with each data point separated by a pipe (|) character.

CUSTOMIZED

Myriad RBM also has the capability to provide customized data files in order to meet particular requirements.

Some of the commonly requested options are described below. These options will incur additional fees reflective of the complexity of the request.

Custom File Preparation:

Customers or their CRO may require a specific file format for their lab results. It may be an Excel format or, more commonly, a text file format with each data point separated by a special character, e.g. separated by commas (,) or by pipes (|).

In these cases, custom software is written to provide the result data in the desired format. Here are some examples of what a custom data file may include:

- ▶ Sample demographic data that has been received in a tabular electronic format.
- ▶ Translated data, e.g.
 - Translation of analyte names to customer analyte names and/or code values
 - Translation of manifest visit values to customer visit names and/or code values
 - Translation of result data, e.g. reporting the code BLQ for results below the LLOQ
- ▶ Calculated data, e.g. unscheduled visit repeat visit numbers

Examples of what steps the file generation process can include:

- ▶ Checks for data defined as mandatory
- ▶ Checks for data exceeding a defined field length
- ▶ Date and time formatting

Custom file generation services may include:

- ▶ Specification review and collaboration
- ▶ System design and programming
- ▶ Documentation of requirements, design, and validation plan
- ▶ Execution and review of validation process
- ▶ Test transfer
- ▶ Verification and production transfer(s)

Adding Data to the Myriad RBM Lab Report

The Myriad RBM standard report includes a single sample identifier. This is the sample name that was submitted along with the physical sample and was used to track the sample and data throughout the testing process. Additional sample demographic data can be added to the standard lab report.

File Delivery Options

Many customers require secure transfer of their lab results.

Secure delivery methods include:

- ▶ Email delivery of a zipped and password protected file.
- ▶ Email delivery via a secure email system, e.g. Cisco Registered Envelope
- ▶ Delivery to your secure FTP server
- ▶ Delivery to your secure web/cloud server

This document addresses some of the more common requests for results processing. Please contact Myriad RBM at info@myriadrbm.com to discuss your organization's specific data needs.
