

★ StarCruisers ★

A parent-child interactive 45
minute class (19 mo. to 24 mo.)

This class introduces a little structure to the 45 minute parent involvement class. The instructor is in class to help your child develop their spatial awareness while gaining control over their body by working alongside their peers. We work on their vestibular stimulation by using a curriculum designed to enhance their balance & coordination, language & speech, spatial awareness for math & abstract thought, visual perception for reading and comprehension, organizes the nervous system and begins to familiarize with midline crossover for bilateral integration. Come join us in helping your child use activities to accomplish milestones in their development in a safe, fun and clean environment!
