Pickering weather report

iOS: Most weather apps have some allergy feature, but if you want to skip the right information the nose wants the most, allergies can show you the pollen count in your area at a glance. The app is so simple that this icon is solid color. This will provide a pollen count forecast for the next few days based on your location. If you need a more full weather app solution, you can take a look at our pick of the best weather app for iPhone.The iPhone has a remarkable number of weather app options, and you'll find a ton of that suit... Read more Allergy | iTunes App Store via One Thing Well Keep Up to Date with the latest daily buzz with BuzzFeed Daily newsletter! Weather apps usually tell you too much information or too little. They either reskin superficial information that could glean your hand out the window or provide an absurdly deep dive that only a meteorologist working on a global network of doppler radars could figure out. Can't be a happy medium? Weathertron, Ryan Lucas and Kevin Lynagh might have found a sweet spot. It's an iPhone app that sucks 16 different weather sources, then translates relevant information into a clear way to visualize the data. We did not explicitly set out to design a minimum or maximum UI for this app, Lucas tells Co.Design. We wanted to provide the most useful information as quickly as possible. At first glance, you may be impressed by its bar charts and cloud gradients, but like any well-designed infographic, you will speak its language for a few moments. A one-page daily forecast is basically one of the timelines to be cleaned up. Different layers of information run from top to bottom. And moving your thumb to your left right will bring you to the future. At the top of the screen, you'll see the most basic distribution for the moment, like clear and 62 degrees. If you don't want to get worse, it's your weather report. As your eyes look down at the page, the next thing you can do is schedule a cloud cover through the day. Instead of conveying a degree of blur as a percentage, Weathertron features cloud symbols with five different opacity. The bonus is that they actually look like clouds, Lucas explains, so not only is it visually easier to parse than table numbers, it looks a hell of a lot better. Below is a graph of precipitation. Again, instead of pulling a few percent chance of rain, the app writes out how much rain there should be on the hour-one bar graph. But it's only part of the utility because the way the graph is calculated is actually a bit of a perceived hack. As people plan their day around either a sprinkle of rain or rainfall, rainfall bars are scaled logarithmically rather than linear, Lucas writes. So, if there is rain at all, the user can see it, but if there is a ton is not uselessly spikes out at the top of the chart. Finally, you'll get to a simple schedule temperature forecast. The ups and downs are marked, but to keep the visuals clean, you actually need to scrub through the thumb to find the exact times of all these temperatures. Your eyes will then be pulled straight back to the top of the page-to clear and 62 degrees forecast, or maybe 50s and rain today. (Swiping a quick screen will pick up tomorrow's forecast. And the seven-day forecast is always just a tap away.) You may ask why go through the whole series of graphics, when all you wanted to know was the weather forecast? Well, like all useful data visualizations, Weathertron is a medium between superficial and informative to create something that is just sensitive through context. You can step back and look at all the data in concert and really see the relationship, Lucas explains. Like a rapid drop in temperature, which is accompanied by a quick cloud cover collection and a large storm. We really haven't seen many other applications-or-weather reports of any-coming data from this visual approach. Weathertron's App Store now comes for \$1.Download it here. Getty Images North America/Getty Images News/Getty Images Weather in any region is important because it has a significant impact on the water, sunlight and temperature ecosystem, according to the University of Illinois. These factors play a serious role in influencing the species of plant and animal species that survive in the region. Certain weather patterns can also cause dangerous storms and natural disasters. Variations in long-term weather conditions and trends can cause more or less water or sunlight in certain areas than other regions. All living beings need water, but because some organisms require more than others. Weather in the ecosystem determines which types of living creatures are best suited to live there. This principle also applies to the amount of sunlight. The intensity and duration of sunlight in the region determines whether or not it is able to sustain different species of plant life. According to the University of Illinois, the weather can also have a serious impact on life, both in humans and animals, in the short term. Natural disasters, such as hurricanes and tornadoes, result from a combination of certain weather patterns and can injure or kill thousands of people depending on their extent. These disasters also often damage cities and ecosystems. Therefore, it is possible to predict and understand weather conditions is a very useful skill in preparing for disaster. The weather is a serious topic ... well it usually is; Here are 11 times it was anything but. You want some more weather-conscious antibodies? Check out those 10 TV weather forecasters who are having very bad days. via YouTube I have to say His Royal is quite engaged in front of the camera. If he wasn't royal, he would have been a very good meteorologist! youTube If ads are supposed to sell a product, it will definitely sell a weather channel. via YouTube You know you're in some seriously cold temperatures when your weather man presents his forecast wearing toboggan. via YouTube Oh my god! Do you read how many times this woman is going to fail her weather report? via YouTube We all have these moments (especially 4:30 in the morning)... Our own dissidents aren't just caught! via YouTube I do not know what is funnier ... Chch Canada's Nicola Jones charming freak-out, or shaky shots of her uninvited guest. Through YouTube This clip gives new meaning to the expression newstos. The fact that the weatherman's contributors won't let him live it is priceless! via Youtube This is the broadcast meteorologist's worst chromatic-key nightmare! Through YouTube, this poor weather forecast was a #2 reason to take off. via YouTube It seems East Anglia is revenge all the time for its weather forecasts to be misunderstood. October 30, 2020, 3:26 pm UTC / Source: TODAYBy Samantha Kubota2020 is a dark time - between the ongoing coronavirus pandemic, election fatigue, the murder of wasps and whatever the plot twists come the finale. So, in the name of self-care, take a moment to enjoy this sweet viral video. A young New Orleans boy named Lenny Sandifer has captured an adorable clip taken by his father, Eddie, putting his weatherman cap on the account of Hurricane Zeta.While 2. Gripping his mic - which may have been missing a part, but he didn't let that deter him - he nailed the classic like-you-look-over-my-shoulder gesture, his father's excellent videography skills panning to follow the shot. It's really crazy, he adds. So stay inside, stay safe. She really nails this live report - and the weather pros thought so too! New Orleans meteorologist Scot Pille of WGNO-TV shared Lenny's video on Twitter, writing: 'Oh. My. Goodness. - I'm losing my job. Then today your AI Roker got a comment. I'm in front of this young man, he wrote. Same, All! Same. Same.
