

CLIENT CASE STUDY

Client Name:

Martina *

Age:

32 Years

Country:

USA

Time Trying to Conceive (TTC):

Over 3 Years

Case History Summary:

- Two Miscarriages

Natural Treatment Summary:

Martina heard me speak at the Fertility Focus Telesummit and got in touch with me. She was very worried about a particular substance that was found in high amounts in her garden which she thought may have been responsible for her two recent miscarriages. Martina got pregnant once between her two miscarriages and carried her healthy son to term. But the main difference was that when she got pregnant with her first son she was living in another country for a year. After she came back and tried to conceive again she miscarried again. She joined the program and made some investigations and followed the advice. Indeed her backyard was a rich source of radioactive gas Radon which was predisposing her to miscarriages and could have potentially damaged her health over long term exposure.

Length of Treatment:

4 Months

Clinical Outcome:

Birth of a healthy baby boy.
