

# CUSTOM ENGINEERED FOR REVOLUTIONARY PERFORMANCE.

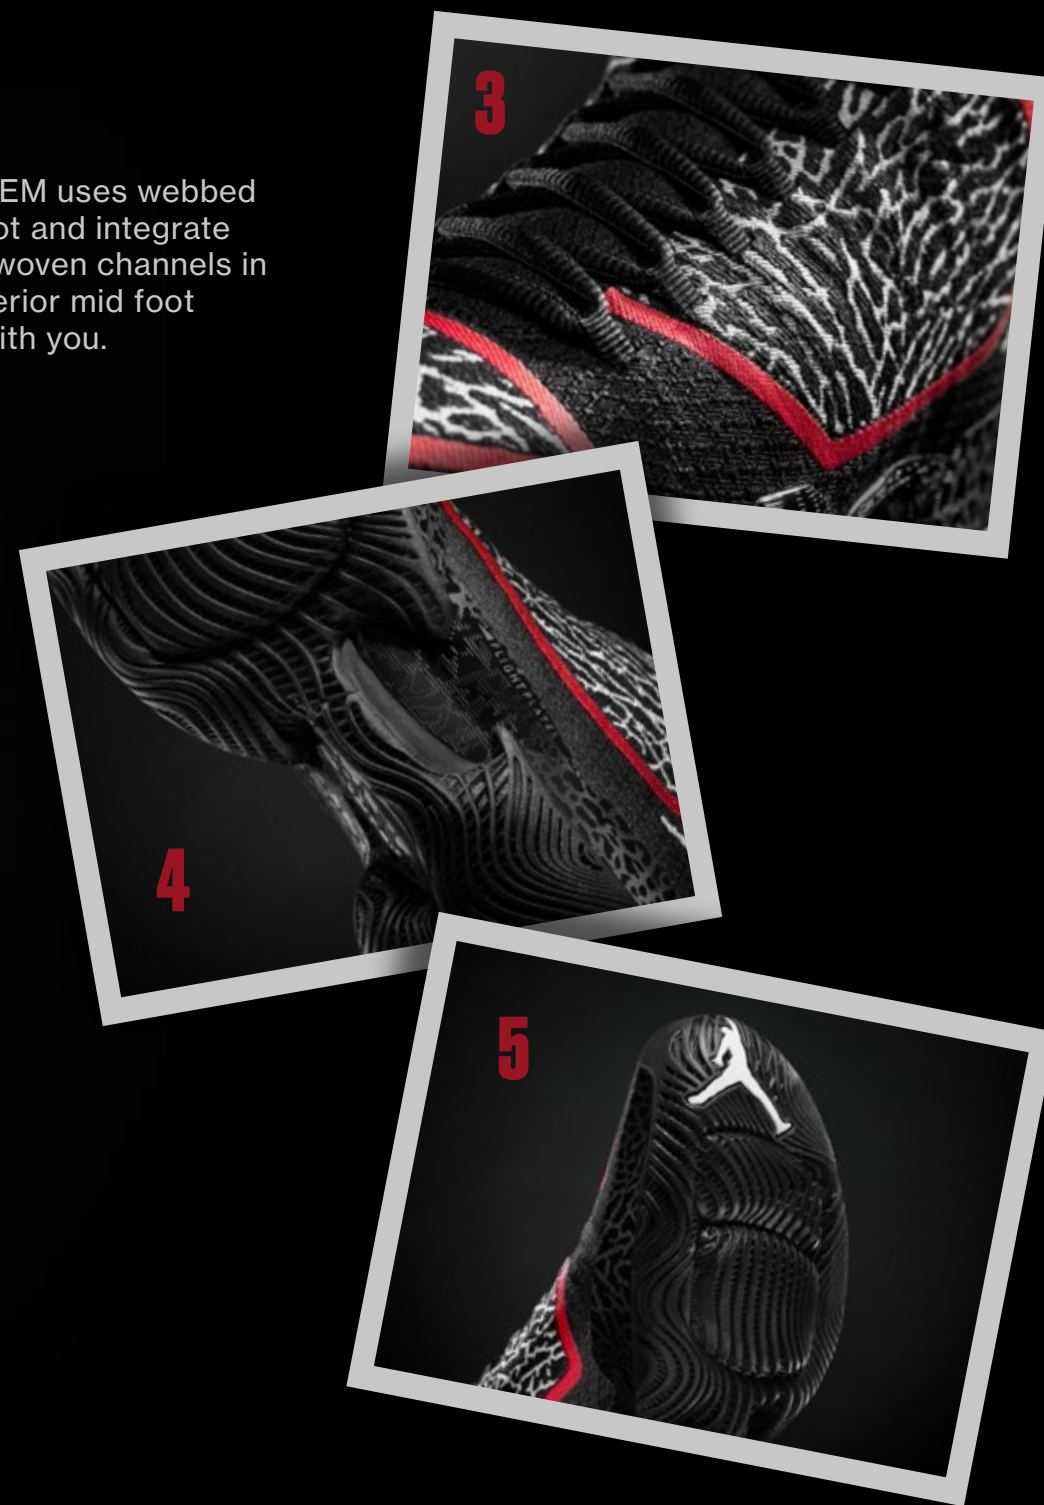

The Air Jordan XX9 features an updated Flight Plate and the first use of a performance-woven upper to create the latest revolutionary sequel in the Air Jordan line. The performance-woven upper is woven in a single piece, integrating all the critical features of shoe construction into one streamline layer.

**1** The PERFORMANCE-WOVEN UPPER provides support without excess layering. The four layers of the woven upper provide the athlete with everything they need; comfort, support, strength and protection.

**2** ARTICULATE PADDING lines in the collar help prevent the heel from slipping inside the shoe.

**3** FLIGHT WEB FIT SYSTEM uses webbed straps that wrap the foot and integrate with the laces through woven channels in the upper. It offers superior mid foot lockdown that moves with you.

**4** RE-ENGINEERED FLIGHT PLATE provides maximum energy return for a smoother ride. An added tendril between the forefoot and heel provide a smooth heel-to-toe transition.

**5** The OUTSOLE contains a combination of clear and solid rubber for durability on a variety of surfaces.
