

Network and Systems Administrator

noosa yoghurt – Bellvue, CO

G'day!

Our IT blokes and sheilas need a **Network and Systems Administrator** to help with "IT stuff." Actually, to be more specific and help you figure out if this is the job for you, what we need is someone who:

Provides technical leadership and hands-on work to ensure all company networking and server systems operate at peak efficiency and reliability while maintaining high levels of security.

Our **Network and Systems Administrator** will manage both on-premise and cloud-based infrastructure and related software solutions. They look for opportunities to make improvements to existing infrastructure assets to maximize value, stability, and performance. They stay current with new infrastructure technologies and makes recommendations for adoption.

Main focus will be to:

- Ensure all server images and data, as well as network configurations are backed up on a regular basis to support recovery objectives.
- Plan and implement projects for improvements or new technologies.
- Work with key third-party technology and support vendors to extend noosa's capabilities for advanced projects and support.
- Work collaboratively with plant engineering team and other departments to support their projects and daily operational needs.

And we need someone who has more than just great technical skills. We need a **Network and Systems Administrator** who has:

- Excellent customer service and support skills. Willing to step in and provide daily support as required.
- Provides mentoring and technical guidance to other members of noosa IT team.
- Collaborative team member; works well with staff at all levels.
- Project management and communication, both oral and written. Knowledge sharing and documentation of technical solutions and support procedures.

We need an experienced professional as our next Network and Systems Administrator. This means someone has:

- 5+ years as lead system and network administrator
- 5+ years managing Cisco iOS switches and ASA's in both LAN and WAN configurations, including advanced fail-over and redundancy topologies.
- 5+ years advanced Windows Server experience, including Active Directory, Group Policies, and security best practices
- 5+ years deploying and managing virtual servers, preferably using VMware with Veeam.
- Associates or bachelor's degree preferred.
- Networking experience in a manufacturing or industrial context preferred.
- Demonstrated project management and documentation experience.

Job Type: Full-time
