

**Energy Sources**

These energy resources were used to generate electricity for the PJM region, of which Energy Plus is a member, from April 2019 – March 2020.

|                                    |                       |
|------------------------------------|-----------------------|
| Coal.....                          | 21.6%                 |
| Gas.....                           | 38.2%                 |
| Nuclear.....                       | 34.3%                 |
| Oil.....                           | 0.1%                  |
| Renewable Energy:                  |                       |
| <i>Captured Methane Gas</i> .....  | 0.3%                  |
| <i>Hydroelectric</i> .....         | 1.3%                  |
| <i>Solar</i> .....                 | 0.4%                  |
| <i>Solid Waste</i> .....           | 0.5%                  |
| <i>Wind</i> .....                  | 3.1%                  |
| <i>Wood or other Biomass</i> ..... | 0.2%                  |
| Total Renewable Energy.....        | 5.8%                  |
| <b>Total Energy Resources.....</b> | <b><u>100.00%</u></b> |

**Air Emissions**

Pounds Emitted per Megawatt-hour of Electricity Generated

|   |         |
|---|---------|
| Sulfur Dioxides (SO <sub>2</sub> )..... | 0.478   |
| Nitrogen Oxides (NO <sub>x</sub> )..... | 0.415   |
| Carbon Dioxide (CO <sub>2</sub> ).....  | 818.420 |

Energy Plus is a member of the PJM regional transmission organization, and the information on this notice includes regional energy sources and air emissions data, as calculated by PJM.
