

Mitigating risk of extravasation with power injection

Continuing education webinar presented by Lynn Hadaway, M.Ed., RN-BC, CRNI®

The incidence of extravasation of contrast media has increased since the introduction of power injection. Published rates are low; however, the high number of estimated tomography procedures puts many patients at risk. The outcomes for an individual patient can be devastating and long-lasting. Learn best practices for what you can do to reduce the risk.
