COURSE DESCRIPTION

This program will explore the differences between Performance Improvement (PI), Evidence Based Practice (EBP) and Research projects

OBJECTIVES

Upon completion of this educational program, the participant will be able to:

- Discuss commonly used terms, tools and methods used in PI and EBP
- Distinguish PI, EBP and Research studies
- Describe potential PI and EBP activities that can be developed as potential projects.
- Discuss the prevalent current significance of the opioid epidemic to the pediatric population.
- Describe the need to educate about proper disposal of opioids.
- Identify key non- pharmacological pain interventions.
- Review how the electronic health record can be a tool in culture change of pain management.
- Learn the current data on mental health
- Review the Depression Screening questionnaire

We're Going Green: Handouts available by email to download after the program based on availability and speaker preference.
