

Supporting **you** to make healthcare better

Pressure Injury Prevention Education Course

This course covers the incidence and prevalence of pressure injuries, offering insights into the anatomy and function of the skin. Participants will learn to identify factors putting hospitalized patients at risk for pressure injuries and understand the physical forces contributing to their development. The course also covers practical aspects, including the use of a pressure injury risk assessment tool and the components essential for conducting a comprehensive skin assessment

Key objectives

- Describe pressure injury incidence and prevalence
- Describe the anatomy and physical function of the skin
- List the factors that put the hospitalized patient at risk for pressure injury
- Identify the main physical forces associated with pressure injury development
- Name the most used pressure injury risk assessment tool
- Describe the components of a complete skin assessment
