

NJDOH Launches New Immunization Data Dashboard

Date: February 24, 2026

Public Health Message Type: Alert Advisory Update Information

Intended Audience: All public health partners Healthcare providers
 Infection preventionists Local health departments
 Schools/childcare centers ACOs Animal health professionals
 Other:

The New Jersey Department of Health's Vaccine Preventable Disease Program (VPDP) is excited to announce the launch of a new, interactive immunization data dashboard, now available at: nj.gov/health/cd/statistics/imm-status-reports/index.shtml.

The dashboard highlights key childhood immunization indicators including coverage rates, religious and medical exemptions, provisional enrollment, and out-of-compliance statuses. It replaces the static PDF tables and maps with a modern, user-friendly platform that enhances accessibility, usability, and side-by-side comparison of immunization data.

Version 1.0 includes state- and county-level data presented through multiple views, including summary metrics, trend analysis, interactive maps, school type comparisons, and data tables. Additional enhancements are already in development, with Version 2.0 expected in Summer 2026 to introduce municipality- and vaccine-level reporting.
