

Supporting you to make healthcare better

Lightening the Load: Unpacking Cognitive Overload

Today, roughly 80% of medical-device user errors occur due to cognitive overload.* Hospital systems and clinical leaders are challenged with creating environments and systems to help lift some of the burden placed on healthcare providers. In this course, we'll discuss system wide solutions to address these challenges, how technology can play a pivotal role in lightening the load and the positive impacts these changes have on nursing wellbeing, and patient care.

Key objectives

- Discuss cognitive burden and the three different types
- The factors that contribute to a heavy cognitive burden
- How a heavy cognitive burden impacts nurses and patients
- Solutions to cognitive burden
- How technology can help lighten the load

Medical Education
Empower. Educate. Innovate.
