CRRT Optimization and Anticoagulation

with Dr. Luis Juncos*

When:

January 12, 2027

5:30PM-9PM

Where:

Iron Hill Brewery & Restaurant - Hershey

101 W Chocolate Ave,

Hershey, PA 17033

Dr. Luis Juncos

Dr. Luis A. Juncos is the Senior Director of Critical Care in the Global Medical Office at Fresenius Medical Care and an Adjunct Professor at the University of Arkansas for Medical Sciences.

He earned his MD from the University of Cordoba, Argentina, followed by a research fellowship in hypertension and vascular research and an internal medicine residency at Henry Ford Hospital in Detroit. He then completed fellowships in nephrology and critical care at the Mayo Clinic, where he joined the faculty in the Divisions of Nephrology and Critical Care Medicine and ultimately became Chief of Intensive Care Nephrology. Dr. Juncos moved to the University of Mississippi Medical Center to expand his physiology research, serving as a professor of medicine, physiology, and biophysics, while holding the titles of John D. Bower Chief of Nephrology and Billy S. Guyton Distinguished Professor of Medicine. After 11 years, he transitioned to the Central Arkansas Veterans Healthcare System as Chief of Nephrology and Professor of Medicine at the University of Arkansas for Medical Sciences.

His clinical focus is on critical care nephrology, particularly extracorporeal blood purification. In his basic research, Dr. Juncos explores the interplay between injurious and adaptive mechanisms, including angiotensin II, nicotine, sex hormones, and heme oxygenase, and their impact on acute and chronic kidney injury. His work also investigated the crosstalk between the kidneys and other organs.
