WHAT DO SCHOOL NURSES ACTUALLY DO?

School Nurses support students who have any number of health concerns including chronic health conditions, concussions, injuries, diabetes, life-threatening allergies, asthma, & oral health issues.

- Support mental health & well-being of students
- Lead public health response to communicable disease outbreaks in the school setting
- Implement and train staff in student health and safety guidelines for schools
- Stock Epinephrine
- Medical Response Team (MERT)
- Asthma support
- Manage the safe administration of medication and health treatments
- Plan and implement medical care plans for the child with health needs
- Coordinate care to remove health barriers to learning & school attendance
- Frontline healthcare providers in schools
