

Why Eye Health Matters for Students

See Better. Learn Better.

1

Stay Focused in Class

Blurry vision makes learning harder. An eye exam will help the eye doctor determine whether your child needs glasses to help them see the board and books clearly.

2

Catch Hidden Vision Problems

A screening is not enough. You and your child may not know something is wrong so it's important to see an eye doctor to get a full eye exam. This eye exam will find any vision issues.

3

Stop Eye Strain and Headaches

Squinting, rubbing eyes, or headaches? An eye doctor can examine your child's eyes and provide treatment to help them feel better.

4

Confidence in the Classroom

Good vision equals better learning! Glasses can help students see their best – and look great doing it! Seeing clearly helps students stay engaged and succeed in school.

For help or more information, contact your school nurse.
