

Winter Park March 21<sup>st</sup> 1904

Dear sir

The following is written in compliance with your request to me, for such information as I may have, as to the depth of lakes Virginia, Osceola, and Maitland. The soundings in these lakes, were taken by me at a distance apart of one hundred feet, and along lines crossing each other, passing through centers of greatest length and width, as near as I could estimate in both respects. The averages given below, do not include shore approaches - i.e. distances off shore of from two hundred to four hundred feet. Nor soundings taken in the narrow place, dividing Osceola into practically two lakes, nor the shoaling waters between near lying islands, or shore points in lake Maitland, but are to be taken as the average of the floors of the three lakes mentioned. The average depth of Virginia, from fifty soundings is seventeen feet, with a maximum of twenty five.

From Chase Scrapbook

The average depth of Osceola from fifty soundings, is nineteen feet, <sup>with a</sup> ~~and~~ maximum of twenty five, and in Maitland, the average from seventy five soundings, is sixteen feet, with a maximum of twenty six. I found in neither of these lakes a greater depth than twenty six feet.

#### Depths of Lakes.

Winter Park, March 21st 1904.  
Mr. L. A. Chase, Chicago, Ill.

Dear Sir:—The following is written, in compliance with your request to me, for such information as I may have, as to the depth of lakes Virginia, Osceola and Maitland. The soundings in these lakes were taken by me at a distance apart of one hundred feet, and along lines crossing each other, passing through centers of greatest length and width, as near as I could estimate in both respects. The averages given below,

do not include shore approaches, i.e. distances off shore of from two hundred to four hundred feet, nor soundings taken in the narrow place, dividing Osceola into practically two lakes, nor the shoaling waters between near lying islands, or shore points in lake Maitland, but are to be taken as the average of the floors of the three lakes mentioned. The average depth of Virginia, from fifty

Yours Truly  
J. F. Johnson

soundings is seventeen feet, with a maximum of twenty-five. The average depth of Osceola from fifty soundings, is nineteen feet, with a maximum of twenty-five, and in Maitland, the average from seventy-five soundings, is sixteen feet, with a maximum of twenty six. I found in neither of these lakes a greater depth than twenty-six feet. Yours truly,

J. F. JOHNSON,

Osceola
