OH-APP RESULTS BY COUNTRY

An illustration of countries’ average assessment scores across six categories of capacity indicators and six categories of performance indicators. The inner ring (level 1) is beginning, and the outer ring (level 4) is mature. The following examples reflect country successes and challenges.

**ETHIOPIA**

By 2015, Ethiopia had laid the foundation for a multisectoral One Health platform. P&R continued to support the development of a Health One Health strategy (OH-STR). Following the National One Health Steering Committee (OHSC) consultations, the Ethiopian Ministry of Health, with support from P&R, launched the OH-STR. The OH-STR defines key principles and provides a framework for the platform’s governance and operational procedures.

P&R also supported Ethiopia in developing a multisectoral government funding strategy. The Ministry of Finance, through the World Bank, developed the Ethiopian Finance Code for One Health Activities. The code defines channels for funding and outlines the government’s funding strategy for One Health.

**LIBERIA**

The National One Health Steering Committee (OHSC) was established to oversee the development of a multisectoral One Health Steering Committee. The OHSC is composed of representatives from the Ministry of Health, Agriculture, Forestry, and Environment, as well as non-government organizations. The OHSC has developed a One Health Strategic Plan and a Governance Framework for the platform.

**MALI**

In 2017, P&R supported the development of a One Health platform in Mali. The platform was established through a participatory assessment process that involved stakeholders from key sectors. The platform’s activities focus on multisectoral engagement, risk mapping, information sharing, and decision-making.

**TANZANIA**

Following the dissolution of the National Zoonosis Commission, the Ministry of Health and Environment established the One Health Project (OH-PR). The OH-PR was established to support the platform’s operational costs, designating key personnel to govern the mechanism and establish roles and responsibilities for members and stakeholders.

**INDONESIA**

In 2016, P&R supported the development of a One Health platform in Indonesia. The platform was established through a participatory process that involved stakeholders from key sectors. The platform’s activities focus on risk mapping, information sharing, and decision-making.

**CÔTE D’IVOIRE**

In 2017, P&R supported the development of a One Health platform in Côte d’Ivoire. The platform was established through a participatory process that involved stakeholders from key sectors. The platform’s activities focus on risk mapping, information sharing, and decision-making.

**NOUVELLES RÉGIONALES**

**POLICY ADVOCACY**

In 2017, P&R supported the development of a One Health platform in West Africa. The platform was established through a participatory process that involved stakeholders from key sectors. The platform’s activities focus on risk mapping, information sharing, and decision-making.

**MULTISECTORAL ENGAGEMENT**

In 2017, P&R supported the development of a One Health platform in East Africa. The platform was established through a participatory process that involved stakeholders from key sectors. The platform’s activities focus on risk mapping, information sharing, and decision-making.

**GOVERNMENT FUNDING SOURCES**

In 2017, P&R supported the development of a One Health platform in South Asia. The platform was established through a participatory process that involved stakeholders from key sectors. The platform’s activities focus on risk mapping, information sharing, and decision-making.

**Mobilization Strategy**

In 2017, P&R supported the development of a One Health platform in South Asia. The platform was established through a participatory process that involved stakeholders from key sectors. The platform’s activities focus on risk mapping, information sharing, and decision-making.

**LEGEND**

- Capacity Indicators
  - One Health governance
  - Leadership
  - Organizational structure
  - Multisectoral engagement
  - Risk mapping and information sharing
  - Decision-making
  - One Health steering committee
- Performance Indicators
  - Progress in joint planning
  - Implementation and implementation
  - Advocacy for resource mobilization
  - One Health stakeholders
  - One Health projects
  - Joint planning among stakeholders
  - Policy constraints
The One Health Maturity Model for Capacity and Performance

**Maturity Model**

The One Health Maturity Model for Capacity and Performance

**ILLUSTRATIVE INDICATORS: C6.1 AND P6.1**

The One Health Maturity Model for Capacity and Performance is a tool designed to assess and Improve the readiness of countries to respond to emerging threats and diseases. The model categorizes countries at different levels of preparedness and response, based on their capacity and performance in One Health activities. Each level is characterized by specific indicators that represent the minimum requirements for effective One Health coordination and response. These indicators include resource mobilization, legislative and policy frameworks, sectoral engagement, and the presence of multisectoral coordination mechanisms.

**PHASE 1: PRE-WORKSHOP**

Before the workshop, a facilitator and participants from the One Health platform have worked to develop the maturity model, assess the needs and gaps, and set the stage for the workshop.

**PHASE 2: OH-APP WORKSHOP**

During the workshop, participants engage in a participatory self-assessment of their platform's organizational capacity and performance. The results from this process are used to inform the One Health platform on its performance and areas for improvement.

**PHASE 3: POST-WORKSHOP**

After the workshop, results are documented and disseminated to inform future improvements and planning.

**PERFORMANCE LEVEL**

**CAPACITY LEVEL**

**PERFORMANCE INDICATOR**

9 countries have a formal structure for the One Health coordinating platform and a series of reference tools (i.e., that have been adopted by governments). Three countries indicate that 70 percent of countries self-report that they have adopted relevant line ministries to adopt a multisectoral approach.

**CAPACITY INDICATORS**

P1.1 Engaging stakeholders
P1.2 Resource planning
P1.3 Policy advocacy
P1.4 M&E plan
P1.5 Official documentation
P1.6 Subnational coordination mechanisms
P1.7 Joint preparedness activities that have adopted a One Health Strategic Plan as a key tool to develop a uniform approach

**PERFORMANCE INDICATOR**

70 percent of countries self-report that they have adopted relevant line ministries to adopt a multisectoral approach.

**CAPACITY INDICATORS**

P2.1 Action underway but preparedness low
P2.2 Subnational coordination mechanisms that P&R are under implementation and being regularly monitored
P2.3 Three countries are engaged in regular monitoring

**PERFORMANCE INDICATOR**

Three countries are engaged in regular monitoring.

**CAPACITY INDICATORS**

P3.1 Decision-making
P3.2 Resource mobilization
P3.3 M&E plan
P3.4 Mechanism for data sharing and analysis
P3.5 Designated chair
P3.6 Official documentation

**PERFORMANCE INDICATOR**

Four countries have plans in draft form and are starting the planning process.

**CAPACITY INDICATORS**

P4.1 Engaging stakeholders
P4.2 Joint planning among One Health stakeholders
P4.3A Policy advocacy
P4.4 Engaging stakeholders on the development of joint preparedness and response planning for outbreaks of unknown origin.

**PERFORMANCE INDICATOR**

P4.4 Engagement of stakeholders on the development of joint preparedness and response planning for outbreaks of unknown origin.

**CAPACITY INDICATORS**

P5.1 Facilitating data analysis and use in decision making
P5.2 Data review and analysis
P5.3 Information sharing
P5.4 Data collection
P5.5 Data sharing
P5.6 Data analysis

**PERFORMANCE INDICATOR**

91 percent of responding countries report that they have engaged relevant line ministries to adopt a multisectoral approach.

**CAPACITY INDICATORS**

P6.1 Adequate human resources
P6.2 Adequate institutional capacity
P6.3 Mechanism for data sharing and analysis
P6.4 Resource planning
P6.5 Resource mobilization
P6.6 Resource planning

**PERFORMANCE INDICATOR**

Twelve of 14 platforms have developed policies, guidelines, and legislative frameworks for at least one prioritised disease. Four countries have plans in draft form and are starting the planning process.

**CAPACITY INDICATORS**

C1.1 C1.2 C2.1 C3.1 C3.2 C4.1 C4.2 C4.3 C5.1 C5.2 C6.1 C6.2

**PERFORMANCE INDICATOR**

Nine countries have a formal structure for the One Health coordinating platform and a series of reference tools (i.e., that have been adopted by governments). Three countries indicate that 70 percent of countries self-report that they have adopted relevant line ministries to adopt a multisectoral approach.

**CAPACITY INDICATOR**
