The decision rests squarely on the shoulders of today’s leaders. To accelerate our impact and ensure that every person can get the care and treatment they need, we must:

- Close the resource gap
- Support innovation
- Strengthen health systems

Anything less will surrender the hard-earned gains of the past decade.

For the first time ever, more than half of the people who need treatment for AIDS are getting it. That’s 1.8 million people globally last year alone. Three people are infected with HIV every minute. AIDS-related illnesses are still the leading cause of death among women aged 15-49 globally. The world cut new infections among children by almost half in the last six years alone. The countries most affected by HIV are spending almost double what they spent before. And young women account for two out of three new infections among young people in sub-Saharan Africa. A clear moment for us to seize is coming.

17 million people living with HIV are not accessing the treatment they need. Nearly 90% of international financing comes from just five countries: the US, UK, France, Netherlands and Germany. 19.5 million people living with HIV are accessing the treatment they need to live healthy and productive lives. So how will the story end?

Any slowdown in the AIDS response now could reverse progress on the disease as Africa’s population grows. Promising new prevention tools are on the horizon – like an injectable drug for long-term HIV prevention and an HIV vaccine. 17 million people living with HIV are not accessing the treatment they need. The countries most affected by HIV are spending almost double what they spent before. And young women account for two out of three new infections among young people in sub-Saharan Africa. A clear moment for us to seize is coming.

TWO SIDES to Every Story

What the latest data on HIV/AIDS tell us

The UNAIDS epidemic is still a global crisis, but new data from UNAIDS shows that the world is making strides to fight back and we must be prepared to stand together.

Here are 11 things you should know about where things stand and what we need to do to ensure this story has a happy ending.

- The world cut new infections among children by almost half in the last six years alone.
- New prevention tools are on the horizon.
- The countries most affected by HIV are spending almost double what they spent before.
- And young women account for two out of three new infections among young people in sub-Saharan Africa.
- A clear moment for us to seize is coming.

Any slowdown in the AIDS response now could reverse progress and put the world years behind.

Alongside efforts to make treatment more efficient, these tools could dramatically accelerate progress in the fight.

Promising new prevention tools are on the horizon – like an injectable drug for long-term HIV prevention and an HIV vaccine.

Promising new prevention tools are on the horizon – like an injectable drug for long-term HIV prevention and an HIV vaccine.

Donor investments in the fight against AIDS dropped for the second year in a row.

Nearly 90% of international financing comes from just five countries: the US, UK, France, Netherlands and Germany.

We are still $7 billion short of what we need to put us on track to end AIDS for good.

More governments, emerging economies, businesses, charities and philanthropists must step up now and contribute more meaningfully.

We are still $7 billion short of what we need to put us on track to end AIDS for good.

Nearly 90% of international financing comes from just five countries: the US, UK, France, Netherlands and Germany.

How will the story end?

The choices we make today in the world of today’s leaders will determine our impact and ensure that every person can get the care and treatment they need.

- Close the resource gap
- Support innovation
- Strengthen health systems
