

## Flashing guide for OnePlus 2: Downgrading from 3.5.5 to 3.1.0

A few things to keep in mind before you start the downgrade process:

- This downgrade process will erase all data from your phone, please perform a full backup of your data before you start downgrading.
- Please ensure the device has enough power or charged in before downgrading.
- Basic functions will be affected if you skip step 3 and perform step 7 immediately.

Steps:

- 1) Download **3.1.1 Intermittent Version** and **3.1.0 Stable Version** and copy them onto the phone's directory. (Example: Storage/Internal Storage/Download)
- 2) Power off your phone and enter Recovery Mode by pressing the Power and Volume - button together for 3 seconds.
- 3) Choose English > Install from local > Choose OnePlus2Oxygen\_14\_OTA\_021\_all\_1610121102\_wipe\_9505656273ba4203.zip from the phone's directory. (Example: Storage/Internal Storage/Download)
- 4) Wait for the flashing process to complete. Do not cut off power and do not interrupt until the process is completed.
- 5) After the flashing, choose "Reboot" and device will restart.
- 6) Repeat Step 2
- 7) Choose English > Install from local > Choose OnePlus2Oxygen\_14\_OTA\_020\_all\_1608262242\_44a55e674a2b4bf6.zip from the phone's directory. (Example: Storage/Internal Storage/Download)
- 8) After the flashing, choose "Reboot" and device will be downgraded to 3.1.0.
