**Abstract:**

**1) space is endless / unlimited / infinite.**

A \_\_\_\_\_ B

(Naik line)

This line started from 'A' and finished at 'B' because white color of book begins from there in this way, where space end, something should be start from their as white color of the page starts from the end of the above line, and as physics rule white color of page acquire space of page in this way whatever be starts from the end of space that thing should require space because matters occupy space. It proves that, where space is end thereafter, there is space that's why space is unlimited or endless.

**2) time is endless / unlimited / infinite:**

A \_\_\_\_\_ B

(Naik line)

As per the above example, this line started from 'A' and finished at 'B' because white color of book begins from there, in this way where time end, another period of time should be start from there, as white color of the page starts from the end of line and as white color of page acquire space of page in this way after the end of one period of time second period of time should be start from there as after one hour second hour is stars. It proves that, where time is end thereafter, there is another period of time, that's why time is endless / unlimited / infinite.

**Keyword - Nature of Space and Time, Space is below value of energy, Space is not form of energy.**

**3) Value and Place of Numbers:**

As generally says numbers are starts from 1 and end at 0 but using the above 1234567890 we can write endless figure of number or value. It is totally endless process. Considering the below example, We will come to know that the below all figures/digit has meaning/value. Moreover if all below numbers of 1) 2) 3) put/collect them in a line thereafter there is meaning to each and every number/digit, though our dictionary haven't word name for the value of every digit. Means value of numbers is endless. Same way process of measuring the end of space line is endless.

**What is means by space:**

“Space means the unmovable thing which can be occupied by object”. If the thing is stretched and compressed means it is a thing which may be called by another name like fabric, molecule mat, particle mat, partial structure etc.

**The Nature of Space.**

**1) Not any Form of Energy:**

“The energy is count by energy through the energy”, as thermometer measure the energy of atmosphere measuring the expansion of mercury because of consumption of energy. Weight scale measure the energy of attraction between gravity and weight by the help of spring's consumption of energy. The things (Space molecule) in space can be measured, observed through the energy, if the things (Space molecule) can consume the energy means they are not part of space but energy. But energy can't measure the minus energy because the energy starts to measure onward 0 from were the energy come into the force / form but energy can't measure below 0 energy or 0 gravity with the help of energy. And space has no value, weight, gravity that's why it do not react, interact or produce any obstruction for energy. But the scale is only the form of energy which can measure the height and length of space.

## **2) No Friction :**

1) Space is not stretched or twisted and there is no friction between space with any object (energy, matter) otherwise, the outside or top layer of atmosphere of the earth would have been more worn than the bottom layer.

## **3) No Power to Hold the Energy.**

Space has not power to hold stars, sun, earth and make revolve in a particular orbit otherwise at least very fast stars and planets would have lost their revolving power because of continuing the thick space or interaction (friction) with thick space as a car's wheel gets stopped/set in mud because of heavy weight of car.

**4) Empty Space :** As generally many scientists considered that there are many slab (slices) of space and time, they accepted that there is empty space between two slices of universe / space (which I do mean) and if there is space means, it is also a part of space means the theories of 'space's slice' also support to "endless space and time theory".

## **5) Difference Between Empty Space and Fabric Space :**

If in empty space a space craft gets more speed because of fire (thrust) it means there should be something in space to produce the thrust in empty space and that is because of fabric structure of molecule / energy but that fabric structure does not play a main role to hold the Earth and Sun but passes energy through it. And this fabric structure of molecule is not space but the thing which acquires the space means the space around the earth is not empty space. But the molecule which are made for space. That means there is interaction between cold molecule with space craft's fire.

## **6) Time is not Made of Matter or Energy.**

According to this theory though astronauts in space (in zero gravity) there is same time which is on earth because human body reacts the same way as on earth (i.e. shaving, brain takes time for thinking process) or nothing any strange significance of time which is seen because of zero gravity.

## **A) The Destruction of Space:**

Energy is not destroyed same way Space is not destroyed and also up to now no one could prove that the space can be destroyed means we can't reach at the conclusion of production of Space and time. It means space is not produced or destroyed.

## **B) The Power of Black Hole.**

It is said that, Light is powerful and not easily gets impacted by anything but because of gravity of black hole, light does not come out from black hole then the same way space also should be attracted into the black hole. but according to some scientists space reacts by different way.

**The distance between A and B is 2 feet.**

**The tank filled by water**

L

### **C) Nothing Means Something**

See the above box, there is a water. if we put out water from the box then there is air (atmosphere) and if we drag out air from box what will remain? According to the modern scientist there is small molecule of space and if those molecule are put out of the box then what remain ?, if space is made of matter and if we drag out that matter from the inner side of the box what will be remain inside the box ? Some will say there remain nothing no space remain. then why and how the distance remain between **A** and **B** ? means as atmosphere is not space but acquire the space, same way that thing (molecule of space) acquire the space but not itself is space.

### **D) The Space Means**

As a memory card has a video clip of nuclear explosion. we can see this explosion again and again by the help of memory card but that attack do not harm memory card because this video clip is a wave of electric current as **universe is a form of energy** and memory card is not wave of electric current as **space is not form of energy** and we can't touch this space because we are a form of energy but we can move among it as electric current move among memory card.

### **E) New Compound.**

If the space molecule allow energy to get into it then there should be new compound at every time because of changing thickness of space.

## F) Compressed Matter

It is said the black hole has power to compress earth into a tennis ball means the distance between molecule or among the molecule will be finished and earth become a single compressed molecule means there is space between two molecule or among the molecule (The space which I do means).

## G) Spiral Galaxy.

If Space is a fabric then it should form the form of spiral galaxy as water get shape arranges the balls in spiral form while getting off from the tank through the bottom hole. This form refer space as well as stars is compressed into the center of the galaxy as the water as well as small ball of the tank get shape while getting off, means the whole fabric straching by different galaxies at different place at different direction and if we add the new information about the increasing distance and speed between stars and galaxies. It refers the fabric of space is tearing into the pieces and that's why the galaxies getting more speed because of getting independent from each other. But according to the many scientist, space can't tear into the pics. Means there is some or great confusion in the theories which are related with fabric space.

## Acceptation of Old Theories and Scientists :

### The point of space :

According to the many scientists and theory of big-bang etc. 'universe, space, matter and time was a just **point** means they accepted that there was space before the big bang because the **point** (the point of universe, space, and time) also require space as like this full stop ( . ) require space of the white paper as well as around this full stop there is also space. Means accepting the existence of the **point** (the point of universe, space, and time) before big bang , the scientists accept existence of space before big bang.

### Sequence of Time Period :

According to many scientists, the big bang produced the Universe, space, time and matter and after a period of time the whole universe, space, time and matter will become a point and again there is another big bang. Means there is beginning after the end and this is endless process. It means the process is going on one after another and time is equipment to measure and record the sequence of incident as we measure and record the sequence the incident by the reference of clock's hour, minute and second's sticks. Means the cycle of big bang supports 'endless, space and time theory'.

## 2) The Connection Between Space and Time :

According to many great and respected scientist, there are many slab / slice of space and time and we can get across from one to another. If we can get across one slab means we get disappear from one universe or space means at one point those respected scientist accept that we can't sent a copy of ourselves to another space and time. Same way we can't get or meet a copy of ourselves of another space and the past or future time means space is not divided in slab or slice and space never play any part to attach time of past and future but present.

**Endless things** : Reaching at particular point, near about all scientists have accepted that few things of the universe is not destroyed. Means there is some thing means by another way they accept that the space and time are also endless because space which is occupied by things(energy) and time is a thing which is the equipment to measure and record the sequence of incident.

**Conclusion:** The space and time are the fundamental things for the existence of energy and can't be valued as energy is valued because space and time is not the form of energy.
